MAPC comments on Route 1/Norwood study

1 message

Nochur, Aditya <ANochur@mapc.org> Tue, Oct 11, 2022 at 4:26 PM
To: "sasante@ctps.org" <sasante@ctps.org>
Cc: "Pollack, Travis" <TPollack@mapc.org>, "Bourassa, Eric" <EBourassa@mapc.org>

Hello Seth,

Thanks again for the opportunity to participate in the process for the Route 1 Priority Corridor Study in Norwood. Please see below for MAPC's comments and let us know if you have any questions or responses. I've also included a couple of comments from Travis on the 9/20 meeting presentation which are relevant for the final report as well.

Can you let us know if the final report will be presented at an upcoming MPO meeting and if so, when?

Best,
Adi

MAPC Comments on Route 1 Priority Corridor Study in Norwood

Page-specific study comments

Pg. 16: Can Figure 1 be updated to show the 34E bus in addition to the commuter rail routes?

Pg. 17: Can a mention of transit be added to the goal of "increasing the quality and quantity of walking and biking options"?

Pg. 17: The community survey should be mentioned under the Community Engagement heading.

Pg. 29: MAPC appreciates the mention of the Neponset Valley Route 1/1A study and its microtransit recommendations.

- Can the report also explicitly mention that the recommendation for a redesign of Route 1 (including walking, biking, and transit) was part of the Neponset study?
- Can the report also mention that long-term improvements along Route 1 will support potential future fixed-route transit in the corridor? Fixed-route transit is more efficient than micro-transit long-term.

Pgs. 32-33: Can the Walking Challenges subheading explicitly mention the fact that 90% of the northern direction of Route 1 and 60% of the southern direction lack sidewalks?

- This finding was verbally presented at the meeting on 9/20 and brings into stark and compelling focus the pedestrian infrastructure deficiencies along the corridor. However, this finding is not obvious from the report unless one takes the time to analyze Figure 4 on pg. 30 (which was also included on slide

12 from the 9/20 meeting presentation).

- See also Travis' comments below on the 9/20 meeting presentation re: being specific about unsafe conditions for pedestrians and cyclists.

Pg. 69: Can the installation of plastic flex posts to calm traffic and improve pedestrian safety be added to the list of Short-Term Improvements?

Pgs. 69-70: Can the installation of bumpouts/curb extensions, the removal of slip lanes, and "no right on red" and pedestrian-only signal phases be added to the list of Corridor Wide Improvements?

- Bumpouts/curb extensions (which can be installed in the short-term using plastic flex posts -- see also comment above for pg. 69) create narrower turning radii and travel lanes, calm traffic, reduce crossing distances, and improve pedestrian/driver visibility.

- Slip lanes interrupt the pedestrian environment and create safety hazards for people walking.

- "No right on red" and pedestrian-only signal phases reduce pedestrian/driver conflicts and improve safety for people walking.

Pg. 76: Can the report note the pros/cons of the rotary vs. diamond interchange at Pendergast Circle, especially for vulnerable road users (pedestrians, cyclists)? Some initial thoughts below.

- The proposed diamond interchange seems better for pedestrians than either of the rotary options, which would require people walking to go significantly out of their way to access crossings across Nahatan/Neponset Streets.

- The potential recommendation to "Convert [Pendergast] circle into a roundabout with accommodations for walking and biking and slip/bypass lanes to reduce speeds of vehicles and increase capacity" has some apparent contradictions.

    - Can the recommendation to include slip/bypass lanes be removed? Slip/bypass lanes can *increase* vehicle speeds and also interrupt the pedestrian environment and create safety hazards for people walking (see also comment above for pgs. 69-70).

Other study comments

- Can the visual Summary of Improvements (slide 35 from the 9/20 meeting presentation) be included in the report?

- Slide 35 from the 9/20 meeting presentation (see comment above) also proposes the installation of two midblock crossings at specific locations, but this recommendation has not been included in the report.

- Is CTPS no longer proposing these midblock crossings and if so, why?

- If CTPS is still proposing these midblock crossings, can they be explicitly mentioned in the report? Will these crossings be signalized in some fashion?

- Can the report mention the need for the Town of Norwood to consider walking/biking improvements along the local roads that intersect with Route 1 to maximize pedestrian/bicycle/transit access and connectivity along the corridor?

  - Pgs. 19-22 of the report note the lack of sidewalks on parts of several local roadways, including Union Street, Morse Street, and Access Road.

- Can the report include a map of local land uses and/or more information on destinations people are accessing along the corridor?

  - Pgs. 23-26 of the report briefly describe the land uses in the vicinity of the study intersections.

  - The community survey may have relevant information on destinations along the corridor.

Comments from Travis on 9/20 meeting presentation

- Slide 7 (LOS Existing PM Peak hour). I've said similar comments before to Seth and CTPS on the Dedham corridor study. At a minimum, I would not show green-yellow-red in the circles; **maybe** just show red for "F" without green or yellow for anything better than "F". I prefer if they did not assign A-F scores on the delay, since these are placing a score/grade on queuing time that may not be universal for all users. Just show the number of seconds of delay as a fact, without a grade or score, especially if we're not assigning any type of grade/scores on the pedestrian or bicyclists level of service or level of comfort/safety (see next comment).

- Slide 12 (Mobility): Good information here, but as noted above there's no "Level of Service" for pedestrians or cyclists included. I would like the final report to note the distance between signalized crossings (i.e., how far does someone need to walk to get to a signalized crossing), and note how much of the corridor has no sidewalk(!) Be specific on data such as the lack of a cycling network. The report should be specific on the unsafe conditions for peds/cyclists, which are reflected in the community survey as well. I'm sure Seth will include that in the report, but just noting I don't see it in the slide show.

- Slides 27-29: Love the idea of sidewalk level bike path. I'm seeing that street level bike paths with flex posts that get run over by big vehicles are not working.

MAPC Comments on Route 1 Priority Corridor Study in Norwood

Page-specific study comments

Pg. 16: Can Figure 1 be updated to show the 34E bus in addition to the commuter rail routes?

MPO staff updated Figure 1 to include bus route 34E.

Pg. 17: Can a mention of transit be added to the goal of "increasing the quality and quantity of walking and biking options"?

MPO staff added transit option to the goals.

Pg. 17: The community survey should be mentioned under the Community Engagement heading.

MPO staff mentioned the community survey in the heading on Community Engagement.

Pg. 29: MAPC appreciates the mention of the Neponset Valley Route 1/1A study and its microtransit recommendations.

- Can the report also explicitly mention that the recommendation for a redesign of Route 1 (including walking, biking, and transit) was part of the Neponset study?

- Can the report also mention that long-term improvements along Route 1 will support potential future fixed-route transit in the corridor? Fixed-route transit is more efficient than micro-transit long-term.

MPO staff incorporated those two recommendations into the report.

Pgs. 32-33: Can the Walking Challenges subheading explicitly mention the fact that 90% of the northern direction of Route 1 and 60% of the southern direction lack sidewalks?

- This finding was verbally presented at the meeting on 9/20 and brings into stark and compelling focus the pedestrian infrastructure deficiencies along the corridor. However, this finding is not obvious from the report unless one takes the time to analyze Figure 4 on pg. 30 (which was also included on slide 12 from the 9/20 meeting presentation).

- See also Travis' comments below on the 9/20 meeting presentation re: being specific about unsafe conditions for pedestrians and cyclists.

In addition to Figure 4, MPO staff stated the percentages in each direction of Route 1 in Norwood that are without sidewalks.

Pg. 69: Can the installation of plastic flex posts to calm traffic and improve pedestrian safety be added to the list of Short-Term Improvements?

Route 1 in Norwood is a high-speed corridor (45 mph and 50 mph) and would require stronger and well-designed barriers to separate people who bike from vehicular traffic. May not be a short-term improvement.

Pgs. 69-70: Can the installation of bumpouts/curb extensions, the removal of slip lanes, and "no right on red" and pedestrian-only signal phases be added to the list of Corridor Wide Improvements?

- Bumpouts/curb extensions (which can be installed in the short-term using plastic flex posts -- see also comment above for pg. 69) create narrower turning radii and travel lanes, calm traffic, reduce crossing distances, and improve pedestrian/driver visibility.
- Slip lanes interrupt the pedestrian environment and create safety hazards for people walking.
- "No right on red" and pedestrian-only signal phases reduce pedestrian/driver conflicts and improve safety for people walking.

The Route 1 intersections in Norwood are large. They have been designed to accommodate the high volume of large tractor-trailers that service businesses in the corridor (automobile dealerships, big-box stores, manufacturing, and science and medical technology industries).

Good idea! No Turn on Red signs at selected intersections with poor sight distances.

All crossings on Route 1 have exclusive pedestrian signal phases.

Pg. 76: Can the report note the pros/cons of the rotary vs. diamond interchange at Pendergast Circle, especially for vulnerable road users (pedestrians, cyclists)? Some initial thoughts below.

- The proposed diamond interchange seems better for pedestrians than either of the rotary options, which would require people walking to go significantly out of their way to access crossings across Nahatan/Neponset Streets.

- The potential recommendation to "Convert [Pendergast] circle into a roundabout with accommodations for walking and biking and slip/bypass lanes to reduce speeds of vehicles and increase capacity" has some apparent contradictions.
- Can the recommendation to include slip/bypass lanes be removed? Slip/bypass lanes can *increase* vehicle speeds and interrupt the pedestrian environment and create safety hazards for people walking (see also comment above for pgs. 69-70).

MPO staff, added text to note the advantages and disadvantages of each the options.

At this planning stage the objective is to consider multiple control strategies when planning a new or modifying an existing intersection/interchange. At the design stage, a detailed review will be conducted to for each of the strategies to objectively select a control strategy that meets the project purpose and need that fits the location's context and roadway classification, while providing safe travel facilities for all road users.

Other study comments

- Can the visual Summary of Improvements (slide 35 from the 9/20 meeting presentation) be included in the report?

Yes, MPO staff included the visual summary of improvements as Figure 39 in the report.

- Slide 35 from the 9/20 meeting presentation (see comment above) also proposes the installation of two midblock crossings at specific locations, but this recommendation has not been included in the report.

- Is CTPS no longer proposing these midblock crossings and if so, why?
- If CTPS is still proposing these midblock crossings, can they be explicitly mentioned in the report? Will these crossings be signalized in some fashion?

Yes, MPO staff still recommend the midblock crossings north of Pendergast Circle and they are mentioned in the report. Because of the high vehicle speeds and multiple lanes on Route 1, the crossings would be signalized.

- Can the report mention the need for the Town of Norwood to consider walking/biking improvements along the local roads that intersect with Route 1 to maximize pedestrian/bicycle/transit access and connectivity along the corridor?

- Pgs. 19-22 of the report note the lack of sidewalks on parts of several local roadways, including Union Street, Morse Street, and Access Road.

Yes, MPO staff noted the Norwood Complete Streets Programs at several locations in the report. The walking and biking infrastructure improvements on Route 1 would be more beneficial if they also connect to the proposed Complete Streets improvements on local roads, especially on side streets connecting to Route 1.

- Can the report include a map of local land uses and/or more information on destinations people are accessing along the corridor?

- Pgs. 23-26 of the report briefly describe the land uses in the vicinity of the study intersections.

- The community survey may have relevant information on destinations along the corridor.

MPO staff do not have adequate information on trip destinations along the corridor.

Comments from Travis on 9/20 meeting presentation

- Slide 7 (LOS Existing PM Peak hour). I've said similar comments before to Seth and CTPS on the Dedham corridor study. At a minimum, I would not show green-yellow-red in the circles; **maybe** just show red for "F" without green or yellow for anything better than "F". I prefer if they did not assign A-F scores on the delay, since these are placing a score/grade on queuing time that may not be universal for all users. Just show the number of seconds of delay as a fact, without a grade or score, especially if we're not assigning any type of grade/scores on the pedestrian or bicyclists level of service or level of comfort/safety (see next comment).

MPO staff removed the color codes for the intersection LOS from all figures in the report.

- Slide 12 (Mobility): Good information here, but as noted above there's no "Level of Service" for pedestrians or cyclists included. I would like the final report to note the distance between signalized crossings (i.e., how far does someone need to walk to get to a signalized crossing), and note how much of the corridor has no sidewalk(!) Be specific on data such as the lack of a cycling network. The report should be specific on the unsafe conditions for peds/cyclists, which are reflected in the community survey as well. I'm sure Seth will include that in the report, but just noting I don't see it in the slide show.

Thank you! MPO staff added more text in the report to explain the walking and biking LOS

- Slides 27-29: Love the idea of sidewalk level bike path. I'm seeing that street level bike paths with flex posts that get run over by big vehicles are not working.

Thank you again!

Re: Reminder: Review and Comment on the Route 1 Priority Corridor Study in Norwood

1 message

Holly Jones <hjones@norwoodma.gov> Tue, Oct 11, 2022 at 1:12 PM
To: sasante@ctps.org
Cc: Sarah Bouchard <sbouchard@norwoodma.gov>, Paul Halkiotis <phalkiotis@norwoodma.gov>

Hi Seth,

Sarah recently forwarded the Rte 1 Corridor Study to me for any potential comments. Here are my thoughts.

-I appreciated the figure 27 lower left hand precent image showing a partially seperated bike lane with a traffic calming stormwater bumpout. Route 1 is a lot of impervious that drains to the Neponset Watershed as well as tributaries including Traphole Brook, Meadow Brook, Plantingfield Brook, and Purgatory Brook. Many of these water bodies are impaired and the Neponset has a TMDL for bacteria. Combining traffic calming practices, seperated bicycle lanes, and green instrastructure BMPs like stormwater bumpouts is a win-win-win for water quality as well as increasing green space and reducing the urban heat island effect created by Rte 1.

-Although it may have been part of the selection criteria, the report omits that Rte 1 abuts or runs through several environmental justice neighborhoods in Norwood. In the south there is an EJ neighborhood for minority populations to the West of Rte 1 from the Walpole line to Dean St, while Rte 1 passes through another EJ neighborhood on the north side of town from East Cross St to Plantingfield Brook. These areas should be promoted to higher interest for upgrades to safety and accessibility as well as increased access to green space.

-Rte 1 contributes significantly to a heat island effect in Norwood; safety for bikers and pedestrians includes reducing the heat island effect using tools such as landscaping and green stormwater infrastructure. I would recommend creating bike lanes with concrete rather than asphalt or using a lighter paint in order to reduce heat island effects and extreme temperatures (as in the lower two precent images in figure 27)

-It wasn't mentioned in either short or long-term recommendations to ensure that bicycles are able to trigger traffic light changes at all intersections on Rte 1

-cars making turns or merging will be the most dangerous situation on rte 1 (since there is no parking allowing cyclists to get "doored"). Slowing right-hand turns, including into businesses as well as intersections, will assist this. I'm not sure of the solution for the "on-ramp" type entrances to Rte 1 (Access Rd, Neponset/Nahatan St) but those types of entrances crossing with the bike lanes should also be carefully thought out.

~Holly

Hi Holly,

Sarah recently forwarded the Route 1 Corridor Study to me for any potential comments. Here are my thoughts.

-I appreciated the figure 27 lower left hand precent image showing a partially separated bike lane with a traffic calming stormwater bump out. Route 1 is a lot of impervious that drains to the Neponset Watershed as well as tributaries including Traphole Brook, Meadow Brook, Plantingfield Brook, and Purgatory Brook. Many of these water bodies are impaired and the Neponset has a TMDL for bacteria. Combining traffic calming practices, separated bicycle lanes, and green infrastructure BMPs like stormwater bump outs is a win-win-win for water quality as well as increasing green space and reducing the urban heat island effect created by Route 1.

Thank you. We agree with your comments and will incorporate them in the report.

-Although it may have been part of the selection criteria, the report omits that Route 1 abuts or runs through several environmental justice neighborhoods in Norwood. In the south there is an EJ neighborhood for minority populations to the West of Route 1 from the Walpole line to Dean St, while Route 1 passes through another EJ neighborhood on the north side of town from East Cross St to Plantingfield Brook. These areas should be promoted to higher interest for upgrades to safety and accessibility as well as increased access to green space.

Thank you. Transportation equity was part of the selection criteria. Route 1 abuts and runs through several transportation equity neighborhoods in Norwood and these improvements would increase safety and mobility for those neighborhoods. We added more text to emphasize this benefit under the Summary of Proposed Improvements heading.

-Route 1 contributes significantly to a heat island effect in Norwood; safety for bikers and pedestrians includes reducing the heat island effect using tools such as landscaping and green stormwater infrastructure. I would recommend creating bike lanes with concrete rather than asphalt or using a lighter paint in order to reduce heat island effects and extreme temperatures (as in the lower two precent images in figure 27).

Thank you. Green infrastructure and landscaping improvements such as porous pavements, trees, swales, rain gardens, and bump-outs in the corridor would help to reduce pollution, stormwater runoff, and urban heat island effect. We have addressed this in the report.

-It wasn't mentioned in either short or long-term recommendations to ensure that bicycles are able to trigger traffic light changes at all intersections on Route 1

Thank you. We have included the recommendation in the short-term improvements.

-cars making turns or merging will be the most dangerous situation on Route 1 (since there is no parking allowing cyclists to get "doored"). Slowing right-hand turns, including into businesses as well as intersections, will assist this. I'm not sure of the solution for the "on-ramp" type entrances to Route 1 (Access Rd, Neponset/Nahatan St) but those types of entrances crossing with the bike lanes should also be carefully thought out.

Thank you. These issues would be addressed if the proposed improvements advance to the design and engineering stage. However, a well-designed protected intersection, signage, and pavement markings would minimize potential conflicts between users.

Joe A Collins <jacollins@norwoodma.gov> Mon, Oct 3, 2022 at 1:29 PM
To: Seth Asante <sasante@ctps.org>

Seth,

How many respondents to the survey indicated that they walk or cycle on Route 1? What percentage reported that they walked or cycled?

Here are my comments:

- Traffic speed and distance between places of interest are far too great to make the corridor walkable, even if we were to enhance the miles of sidewalk along Route 1.
- Even if we were to add pedestrian refuge islands, crossing Route 1 would still be a terrifying endeavor.
- We would be better served by enhancing the ability to walk or ride bikes in and around Norwood Center and South Norwood than trying to make the Route 1 Corridor something it's not.
- The intersections are massive for a reason: Many businesses on or along Route 1 in Norwood need tractor trailers to easily access their business to deliver raw materials/goods or pick up goods to be sold elsewhere.
- I agree that Route 1 looks awful, and we could do much to make it look nicer.

I believe your list of walking and cycling challenges (5.2.2) clarifies how much the Town and Commonwealth would need to accomplish for the corridor to become walkable and cycle friendly. Not only would this be incredibly expensive, but I am concerned that it would negatively affect the Town's commercial and industrial tax base by making it challenging for trucks to get to and from places of business along Route 1 in Norwood.

Best,

Re: Route 1 Norwood Presentation Slide Deck

1 message

Seth Asante <sasante@ctps.org> Mon, Oct 17, 2022 at 11:38 AM
To: Joe A Collins <jacollins@norwoodma.gov>

Hi Joe,

Thank you for your comments. They are very good comments and I have responded to them below.

- How many respondents to the survey indicated that they walk or cycle on Route 1? What percentage reported that they walked or cycled?
There were 270 respondents to the survey question: what challenges do you experience walking or biking in the corridor? This number represents about 34% of the total respondents to the survey.

- Traffic speed and distance between places of interest are far too great to make the corridor walkable, even if we were to enhance the miles of sidewalk along Route 1.
The enhancements to walking and biking infrastructure would address current and future needs of the corridor to be able to support the rezoning, smart growth, future transit services, and economic vitality of the Route 1 corridor. The improvements would support near-term microtransit pilots in the corridor to provide key first- and last-mile connections between the commuter rail stations and Route 34E bus stops to the employment centers along Route 1.

- Even if we were to add pedestrian refuge islands, crossing Route 1 would still be a terrifying endeavor.
Yes, I agree. In addition, providing pedestrians with enough time, countdown timers, and moving the pedestrian walk phase to occur before Route 1 through traffic would improve safety.

- We would be better served by enhancing the ability to walk or ride bikes in and around Norwood Center and South Norwood than trying to make the Route 1 Corridor something it's not.
Enhancing walking and biking in Norwood Center and South Norwood is also important. Please let me know which roadways to consider in both neighborhoods. MPO staff would review them for future studies.

- The intersections are massive for a reason: Many businesses on or along Route 1 in Norwood need tractor trailers to easily access their business to deliver raw materials/goods or pick up goods to be sold elsewhere.
The proposed walking and biking infrastructure will not remove any of the truck/tractor trailer accommodations at the intersections—they are very important to the businesses along Route 1.

- I agree that Route 1 looks awful, and we could do much to make it look nicer.
Yes, I agree with you. Route 1 needs improvements to make the corridor a welcoming environment for all users. Green infrastructure improvements such as trees, rain gardens, stormwater treatments, and bumpouts could be included in the design of the improvements to address landscaping and streetscape issues as well as urban heat index.

- I believe your list of walking and cycling challenges (5.2.2) clarifies how much the Town and Commonwealth would need to accomplish for the corridor to become walkable and cycle friendly. Not only would this be incredibly expensive, but I am concerned that it would negatively affect the Town's commercial and industrial tax base by making it challenging for trucks to get to and from places of business along Route 1 in Norwood.
The walking and biking infrastructure and other recommendations are long-term improvements. They would go through several review phases before advancing into projects. If implemented, they would support the economic vitality of the Route 1 corridor.

Thank you for your participation in the Route 1 Priority Corridor Study.

Good afternoon,

Thank you for meeting this morning. Your feedback is highly appreciated. The attached document is the presentation slide deck. Let me know if you have any questions or feedback.

Best,

Seth

Subject: Route 1 in Norwood

Good afternoon Pamela,

The Metropolitan Area Planning Council has been working with the Neponset Valley Transportation Management Association and communities along the Route 1 corridor from Dedham to Foxborough on addressing job/transit access. They are recommending various transit pilot projects but their long-term recommendation is to make that Route 1 corridor more transit, pedestrian, and bicycle friendly.

Also, the Route 1 corridor in Westwood, Norwood, and Walpole was identified in the Boston Region MPO's *Long-Range Transportation Plan's Needs Assessment* as in need of safety improvements and modernization to address multimodal transportation. The MPO's recurring study *Addressing Priority Corridors from the Long-Range Transportation Plan Needs Assessment* focuses on these corridors, where staff do a detailed analysis and develop improvement concepts of a corridor.

We are currently in the process of selecting a corridor for the FFY 2022 study. However, the length of Route 1 in these three communities is too long to be done in one study, so we could only possibly study one of them—Norwood. Route 1 in

Norwood is the busiest in the three communities, serves mixed land uses, and has the most pressing need for safe pedestrian and bicycle accommodations. In addition, safety and operations are concerns, as there are five HSIP crash clusters in this corridor.

I am contacting you to see if District 5 will support studying Route 1 in Norwood to address the corridor needs.
As usual let us know if you have any questions.

Thank you,
Seth

From: Pollack, Travis
To: Seth Asante; Mark Abbott
Subject: Corridor Long-Range Planning
Date: Monday, November 8, 2021 12:01:32 PM

Seth and Mark,

Hope you are doing well. I am working with the Neponset Valley TMA and communities along the Route 1 corridor from Dedham to Foxborough on addressing job/transit access. We're recommending various transit pilot projects but our draft long-term recommendation is to make that Route 1 corridor more transit/pedestrian friendly, similar to the Providence Highway/VFW Parkway recommendations from Dedham and West Roxbury that was just completed.

Eric B. here asked that we include in that recommendation, information on the Boston MPO *ADDRESSING PRIORITY CORRIDORS FROM THE LONG-RANGE TRANSPORTATION PLAN NEEDS ASSESSMENT* https://www.ctps.org/data/calendar/htmls/2021/MPO_1021_Work_Program_LRTP_Priority%20Corridors.html where staff do a very detailed conceptual design of a corridor.

Is this Route 1 corridor already evaluated in this program? What would it take for this corridor to be included in this program?

Also, since this corridor is MassDOT owned, are there other MassDOT funding sources that can be used to do a study and implement multi-modal changes?

Any information would be helpful. Happy to get on a short phone call if that might help. Thanks.

Part 4: Study Location Selection Memorandum

TECHNICAL MEMORANDUM

DATE: **January 20, 2022**
TO: **Boston Region Metropolitan Planning Organization]**
FROM: **Seth Asante, MPO Staff**
RE: **Selection of FFY 2022 LRTP Priority Corridor Study Location**

1 BACKGROUND

During the development of the Boston Region Metropolitan Planning Organization's (MPO) Long-Range Transportation Plan (LRTP), *Destination 2040*, the MPO staff identified existing needs for all transportation modes in the region.[1] The results were compiled in the LRTP Needs Assessment, which is used to guide the MPO's decision-making process for selecting transportation projects to fund in future Transportation Improvement Programs (TIP). The MPO's goals that guided the development of the LRTP Needs Assessment include the following:

- Safety—make all modes safe
- Preservation—maintain and modernize the system and plan for its resiliency
- Capacity Management and Mobility—use existing facility capacity more efficiently and increase healthy transportation capacity
- Clean Air/Clean Communities—create an environmentally friendly transportation system
- Transportation Equity—ensure that all people receive comparable benefits from, and are not disproportionately burdened by, MPO investments, regardless of race, color, national origin, age, income, ability, or sex
- Economic Vitality—ensure our transportation network serves as a strong foundation for economic vitality

Based on previous and ongoing transportation-planning work, including the MPO's Congestion Management Process (CMP) and planning studies, MPO staff identified several priority arterial roadway segments that require maintenance,

[1] *Destination 2040: The New Long-Range Transportation Plan of the Boston Region Metropolitan Planning Organization* was adopted by the Boston Region MPO in August 2019.

Civil Rights, nondiscrimination, and accessibility information is on the last page.

modernization, and safety and mobility improvements. These locations are documented in the LRTP Needs Assessment.

To address problems on some of these arterial segments, the *Addressing Priority Corridors from the Long-Range Transportation Plan Needs Assessment* study was included in the federal fiscal year (FFY) 2022 Unified Planning Work Program (UPWP).[2] This memorandum presents the results of the selection process and provides a recommended study location for the MPO board's review.

By focusing on arterial segments, planners can evaluate multimodal transportation needs comprehensively (with the goal of creating Complete Streets).[3] A holistic approach to analyzing problems and forming recommendations ensures that the needs of all transportation users are considered. Ultimately, this approach will result in roadways where it is safe to cross the street and walk, or bicycle to shops, schools, train stations, and recreational facilities, and where buses can run on time. Typically, the recommended improvements are within a roadway's right-of-way and the interests and support of stakeholders are also considered.

2 SELECTION PROCEDURE

The process for selecting study locations consisted of three steps.

1. MPO staff gathered and assembled data about the arterial segments from the LRTP Needs Assessment and used the data to identify and prioritize segments in need of improvement.
2. Staff examined the arterial segments more closely by applying specific criteria.
3. Staff scored each arterial segment and assigned a priority of *low*, *medium*, or *high* to each segment.

Details about each step in the process are provided below.

[2] The FFY 2022 UPWP was endorsed by the Boston Region MPO on August 19, 2021. The FFY 2022 UPWP was reviewed by the MPO's federal partners and went into effect on October 1, 2021.

[3] A Complete Street is one that provides safe and accessible options for all travel modes, such as walking, biking, transit, and vehicles, for people of all ages and abilities.

2.1 Gathering Data and Identifying Potential Arterial Segments

MPO staff identified 43 arterial segments in 33 municipalities in the Boston region based on the following data sources:

- The Massachusetts Department of Transportation (MassDOT) Road Inventory File and 2014–18 crash database was used to assemble the following information for each arterial segment: roadway jurisdiction, National Highway System status, average daily traffic (ADT), high-crash locations, and crashes involving people walking or biking
- The MPO's CMP data on arterial congestion were used to determine average travel speeds, travel-time index (travel time in the peak period divided by travel time during free-flow conditions), and speed index (average travel speed divided by the speed limit) on each arterial segment
- The MPO's data on gaps in the bicycle network and data on the location of bicycle facilities were used to identify the needs of people who bicycle, including locations where connectivity between bicycle facilities and accommodations could be improved[4]
- Data on Massachusetts Bay Transportation Authority (MBTA) bus service performance and passenger loads were used to determine the percentage of bus trips that do not adhere to the schedule (such as providing late service) or do not adhere to passenger load standards (resulting in crowding)
- Data on MBTA bus routes, subway lines, and commuter rail lines were used to identify which arterial segments serve MBTA buses or stations
- Data on the MPO's transportation equity analysis zones were used to identify areas of concern as relates to transportation equity
- Data selected from MassDOT's Project Information database, the MPO's FFYs 2022–26 TIP project database, MPO planning studies and other studies, and municipal websites were used to obtain data on projects, studies, and TIP projects that are planned or programmed for each arterial segment

Table 1, located at the end of the memorandum, presents the data and information gathered about each of the arterial segments:

- Community

[4] Beth Isler, Bicycle Network Evaluation (Boston Region Metropolitan Planning Organization, May 2014), https://www.ctps.org/data/pdf/programs/livability/MPO_0515_Bicycle_Network.pdf.

- Metropolitan Area Planning Council (MAPC) subregion
- Jurisdiction
- MassDOT district office
- National Highway System
- Number of crash clusters that are eligible for Highway Safety Improvement Program (HSIP) funding
- Transit service performance
- Proximity to a transportation equity analysis zone (within one-half mile distance)
- Relevant studies or projects within or near the segment

Table 1 also includes the score and priority rating that was determined by applying the selection criteria. The processes for scoring and assigning priority ratings to segments are described below.

2.2 Selection Criteria

MPO staff examined the arterial segments closer by applying the following six criteria and assigning points based on the number of criteria that apply to each location.

1. *Safety Conditions, 0–4 points (each of the four criteria is worth one point)*
    - Location has a higher-than-average crash rate for its functional class
    - Location contains an HSIP-eligible crash cluster
    - Location is identified in the Massachusetts *Top High-Crash Locations Report*
    - Location has a significant number of pedestrian and bicycle crashes per year (two or more per mile) or contains one or more HSIP-eligible bicycle-pedestrian crash cluster
2. *Congested Conditions, 0–2 points (each of the two criteria is worth one point)*
    - Travel-time index is at least 1.3
    - Travel-time index is at least 2.0
3. *Multimodal Significance, 0–3 points (each of the three criteria is worth one point)*
    - Location currently supports transit, bicycle, or pedestrian activities
    - Location needs to have improved transit, bicycle, or pedestrian facilities
    - Location has a high volume of truck traffic serving regional commerce

4. *Regional Significance, 0–4 points (each of the four criteria is worth one point*)
    - Location is in the National Highway System
    - Location carries a significant portion of regional traffic (ADT is greater than 20,000)
    - Location lies within 0.5 miles of a transportation equity analysis zone
    - Location is essential for the region's economic, cultural, or recreational development
5. *Regional Equity, 0–2 points (each of the two criteria is worth one point)*
    - Location is in an MAPC subregion where there has not been a priority corridors study
    - Location is in an MAPC subregion where there has not been a priority corridors study in the previous three years
6. *Implementation Potential, 0–3 points (each of the three criteria is worth one point)*
    - Location is proposed or endorsed for study by the agency that administers the roadway
    - Location is proposed or endorsed by its MAPC subregional group and is a priority for that subregional group
    - Other stakeholders strongly support improvements for the location

2.3 Rating Potential Roadways

MPO staff rated arterial segments with a total score of 11 or fewer points as *low* priority; those with a score of 12 to 13 points as *medium* priority; and those with a total score of 14 or more points as *high* priority. Staff gave six arterial segments a high-priority rating based on safety and operational needs, multimodal and regional significance, regional equity, and support for improvements from agencies and municipalities. Staff then examined high-priority segments more closely and excluded arterials for which there were projects that covered a substantial length of the corridor or if the segments met any of the following criteria excluding it from further consideration: recently completed, in construction, in design, under study, or programmed in the TIP with the 25 percent design completed.

The arterial segment of Route 1 in Norwood received the highest score. Staff also evaluated walking and biking accommodations and safety improvement needs for the segment with the highest score by applying the MPO's Pedestrian Report Card Assessment and Bicycle Level-of-Service Metric (Bicycle Report

Card).[5] Based on the assessments, accommodations for people who walk or bicycle on Route 1 in Norwood were rated poor. The location highly qualifies for study based on accommodation for people who walk or bicycle, or safety and operation improvement requirements. Appendix A (attached) contains detailed results of the assessments for Route 1 in Norwood. Based on this evaluation, staff recommends studying the segment on Route 1 in Norwood. Figure 1, located at the end of the memorandum, shows the study area with five HSIP intersection crash clusters.

3 ARTERIAL SEGMENT SELECTED FOR STUDY: ROUTE 1 IN NORWOOD

The arterial segment on Route 1 in Norwood received a total score of 16, based on the selection criteria. Route 1 runs north and south through Norwood, and it serves residential, commercial, industrial, educational, and recreational areas. Within the selected corridor, there are several transportation equity zones that exceed the threshold of the MPO, including minority, limited English proficiency, and carless households.

Being a principal arterial, Route 1 carries local and commuter traffic to and from Boston and connects major east-west roads—Everett Street, Neponset Street, Dean Street, Summer Street, Morse Street, and Union Street. Staff's evaluation indicates that there are safety and mobility problems in the segment. Five locations along the segment contain HSIP-eligible crash clusters, one of which is in the top 200 of intersection crash clusters in Massachusetts. Also, accommodation for people who bicycle is poor and better bicycle connections are needed in the corridor. Accommodations for people who walk need improvement as there are gaps in the sidewalk network.

MassDOT Highway District 5 has been fielding inquiries about improving the safety of people walking and biking along the corridor. MAPC has been working with the Neponset Valley Transportation Management Association and communities along the Route 1 corridor from Dedham to Foxborough on addressing job and transit access. They are recommending various transit pilot projects, but the long-term recommendation is to make the Route 1 corridor more friendly for people walking, biking, and taking the bus. Appendix B (attached) includes various letters of support for studying Route 1. MassDOT District 5, MAPC, and The Town of Norwood also support studying Route 1 in Norwood to identify solutions to these problems.

[5] Ryan Hicks and Casey-Marie Claude, Boston Region Metropolitan Planning Organization, *Pedestrian Level-of-Service Memorandum*, January 19, 2017; Casey-Marie Claude, Boston Region Metropolitan Planning Organization, *Development of a Scoring System for Bicycle Travel in the Boston Region*, November 8, 2018.

For the study, MPO staff would focus on segments of the corridor that would benefit the most, especially regarding safety and for people walking or biking. Staff would also work with stakeholders directly to identify problems and develop solutions. This recommendation meets the selection criteria and supports the transportation improvement policies of the MPO's LRTP.

4 NEXT STEPS

MPO staff will present the recommended study location to the MPO board. MPO staff will meet with officials from Norwood, MAPC, MassDOT, and other stakeholders to discuss the study specifics, conduct field visits, collect data, identify needs, and develop solutions.

TABLE 1
Arterial Segments Considered for Study: Priority Corridors for Long-Range Transportation Plan Needs Assessment Study

Arterial Segment	Community	MAPC Subregion	MassDOT District	Jurisdiction	National Highway System	Number of Top-200 High-Crash Locations 2015–17	Number of HSIP-Eligible Crash Clusters 2015–17**	Crowded or Late Bus	In or Near Transportation Equity Priority Area	Study, Project, or TIP Project	Safety Conditions***	Congested Conditions***	Multimodal Significance***	Regional Significance***	Regional Equity***	Implementation Potential***	Score	Priority Rating	Summary of Comments
Route 1	Norwood	TRIC	5	MassDOT	Yes	1	5	N/A	Yes	MassDOT's I-95 South Corridor Study provided a comprehensive evaluation of the I-95 and Route 1 corridors south of Route 128 that included a recommended plan of short-term and long-term improvements; June 2010. MassDOT Project #609371, Median jersey barrier and fencing upgrade; completed in 2020. MassDOT Project #608052, Route 1 at Morse Street; in design stage. MassDOT Project #608599, Stormwater improvements along Route 1 and I-95; programmed in FFY 2022. MassDOT Project #605857, Route 1 at University Avenue and Everett Street; programmed FFY 2025. MassDOT Project #606545, Median jersey barrier and fencing upgrade; completed in 2012.	3	2	3	4	1	3	16	High	MPO staff recommends studying Route 1 in Norwood to address safety, congestion, and multimodal transportation. This four-mile arterial segment serves mixed land uses and has pressing need for safe accommodations for people walking and biking. There are gaps in the sidewalk network and sections of the existing sidewalks are in poor conditions. The existing 6- to 10-foot shoulders need improvements to provide a safe environment for people biking. In addition, safety and operations are concerns, as five locations along the segment contain HSIP-eligible crash clusters, one of which is in the top 200 of intersection crash clusters in Massachusetts. Finally, MAPC has been working with the Neponset Valley Transportation Management Association and communities along the Route 1 corridor from Dedham to Foxborough on addressing job/transit access. They are recommending various transit pilot projects but their long-term recommendation is to make the Route 1 corridor more transit, pedestrian, and bicycle friendly.
Route 37	Braintree	SSC	6	MassDOT	Yes	1	2	Yes	Yes	MassDOT Project #608651, Adaptive traffic signal control on Route 37 (Granite Street). Installation of adaptive traffic control signal equipment, vehicle detection, communication equipment, and managing software at seven traffic signals on Route 37; in construction. MassDOT Project #607684, Bridge replacement, B-21-017, Washington Street (Route 37) over MBTA/CSX railroad; preliminary design.	3	2	2	4	2	2	15	High	The arterial segment has a 5- to 6-foot shoulder on either side of the roadway for most of the corridor. There are sidewalks on either side of the roadway throughout the corridor. However, the corridor needs upgrades of its infrastructure for safe accommodations of people walking, biking, or taking transit. MassDOT recently completed installing adaptive traffic control signal equipment, vehicle detection, communication equipment, and managing software at seven traffic signals on Route 37.
Route 3A	Burlington	NSPC	4	MassDOT	Yes	0	1	Yes	Yes	MassDOT Project #608068, Installation of an adaptive traffic control signal system on Cambridge Street, Middlessex Turnpike, and Burlington Mall Road. The project includes the installation of compatible traffic signal control equipment, video detection, communication devices and software to integrate 11 MassDOT and 16 town-owned traffic signal locations into one adaptive signal system; in construction.	3	1	3	4	2	1	14	High	On this segment, there are no accommodations for bicycles, gaps in the sidewalk network, and travel lanes that are very wide (drivers form two lanes in each direction). Land use is mixed along the corridor. There are three MBTA bus routes operating in the corridor. Pedestrian and bicycle crashes have occurred in the corridor. The installation of an adaptive traffic control signal system is underway on Cambridge Street, Middlessex Turnpike, and Burlington Mall Road to integrate 11 MassDOT and 16 town-owned traffic signal locations into one adaptive signal system.
Route 9	Framingham and Natick	MWRC	3	MassDOT	Yes	2	6	No data	Yes	MassDOT Project #609402, Framingham-Natick resurfacing and related work on Route 9; programmed FFY 2025; construction slated to begin summer 2026. MassDOT Project #607732, Framingham-Natick Cochituate Rail Trail. The project involves construction of 2.4 miles of rail trail and includes a grade separated crossing at Routes 9 and 30; in construction. MassDOT Project #608006, Framingham Pedestrian Hybrid Beacon Installation at Route 9 and Maynard Road and the Framingham Fire Station; in design. MassDOT Project #608281, Installation of adaptive traffic control signal equipment, vehicle detection, and communication equipment at five traffic signals in Framingham and Natick on Route 9; in construction. MassDOT Project #608836, Drainage improvements on Route 9 at Route 126 interchange and salt shed relocation (Phase 1); advertised for bids as of June 2021.	3	2	3	4	1	1	14	High	The FFY 2021 Priority Corridors for LRTP Needs Assessment Study and several MassDOT projects in the corridor will address issues.
Route 16	Medford	ICC	4	MassDOT	Yes	1	2	Yes	Yes	MassDOT Project #604660, Everett-Medford-Bridge Replacements, Revere Beach Parkway (Route 16), E-12-004=M-12-018 over the Malden River (Woods Memorial Bridge) and M-12-017 over MBTA and Rivers Edge Drive; under construction. MassDOT Project #605531, Structure maintenance, E-12-004=M-12-018, Revere Beach Parkway (Route 16) over the Malden River (Woods Memorial Draw Bridge); in construction.	3	2	3	4	0	2	14	High	In FFY 2019, MPO staff studied Route 16 in Chelsea and Everett and suggested improvements to address safety, congestion, multimodal transportation, and pedestrian and bicycle accommodations. The section of Route 16 in Medford has five HSIP intersection clusters, including two pedestrian clusters. The roadway experiences congestion and high truck volumes. It also carries vehicular, pedestrian, and bicycle traffic to Wellington Station. Studying this segment in Medford will provide MassDOT with improvement concepts to comprehensively address safety, capacity management and mobility, and accommodations for people walking or biking in the corridor.
Route 18	Weymouth	SSC	6	MassDOT	Yes	3	8	Yes	Yes	MassDOT Project #601630, Reconstruction and widening on Route 18 (Main Street) from Highland Place to Route 139 (4.0 miles) includes replacing W-32-013, Route 18 over the Old Colony Railroad (MBTA); in construction.	4	2	2	4	2	0	14	High	This arterial segment was not selected because a MassDOT project, currently in construction, would address problems in the entire segment.
Route 2A/3	Arlington	ICC	4	Arlington	Yes	0	1	Yes	Yes	None	3	2	3	4	0	1	13	Medium	None
Route 203	Boston	ICC	6	MassDOT	Yes	5	12	Yes	Yes	MassDOT Project #606318, Intersection improvements at Gallivan Boulevard (Route 203) and Morton Street; in construction. MassDOT Project #608755, Intersection improvements Morton Street (Route 203) at Blue Hill Ave, at Courtland Road/Havelock Street, and at Havard Street; programmed in the FFY 2019 TIP; in design. MassDOT Project #606896, Reconstruction on (Route 203) Gallivan Boulevard, from Neponset Circle to east of Morton Street intersection; in preliminary design. MassDOT Project #606897, Improvements on (Route 203) Morton Street, from west of Gallivan Boulevard to Shea Circle; in preliminary design.	4	2	2	4	0	1	13	Medium	The FFY 2012 Priority Corridors for LRTP Needs Assessment Study and several MassDOT projects in the corridor will address issues.

Arterial Segment	Community	MAPC Subregion	MassDOT District	Jurisdiction	National Highway System	Number of Top-200 High-Crash Locations 2015–17	Number of HSIP-Eligible Crash Clusters 2015–17**	Crowded or Late Bus	In or Near Transportation Equity Priority Area	Study, Project, or TIP Project	Safety Conditions***	Congested Conditions***	Multimodal Significance***	Regional Significance***	Regional Equity***	Implementation Potential***	Score	Priority Rating	Summary of Comments
Route 2A	Cambridge	ICC	6	Cambridge and DCR	Yes	1	5	Yes	Yes	The City has been transforming the Route 2A corridor to improve safety for people walking, biking, or riding transit and improve travel times and reliability of bus transit service. The City has implemented separated bike lanes, bus lanes, and parking/loading changes throughout the corridor.	4	2	2	4	0	1	13	Medium	The City has implemented several projects to transform Route 2A corridor into a route for everyone and improve safety for people walking, biking, or riding transit. The improvements include separated bike lanes, bus lane, parking/loading times, and traffic signal phase intervals to accomodate people biking.
Route 16	Chelsea and Everett	ICC	4	MassDOT	Yes	7	8	Yes	Yes	FFY 2019 Priority Corridor for LRTP Needs Assessment Study (Chelsea and Everett)	4	1	3	4	0	1	13	Medium	The FFY 2019 Priority Corridors for LRTP Needs Assessment Study and several MassDOT projects will address issues.
Route 135	Framingham	MWRC	3	Framingham	Yes	1	2	No data	Yes	MassDOT Project #606109, Intersection improvements at Route 126/135/MBTA and CSX railroad; in preliminary design.	4	1	2	4	1	1	13	Medium	MassDOT Project #606109, Intersection improvements at Route 126/135/MBTA and CSX railroad. Roadway has received improvements to address congestion and make it multimodal (accommodation for people walking or biking).
Route 107	Lynn	ICC	4	MassDOT and Lynn	Yes	4	10	Yes	Yes	MassDOT Project #808817, Resurfacing of Route 107 and related improvements; programmed FFY 2021. MassDOT Project #608927, Reconstruction of Route 107 in Lynn and Salem; in preliminary design. MassDOT project #609246, Rehabilitation of Western Avenue (Route 107); in preliminary design. MassDOT Project #604952, Bridge Replacement, Route 107 over the Saugus River; programmed 2019. MassDOT Project #26710, Bridge Replacement, Route 107 over the Saugus River (Fox Hill Bridge); completed spring 2013.	4	1	3	4	0	1	13	Medium	This arterial segment was the subject of a Route 107 Corridor Study in Lynn and Salem, which was completed by MassDOT in 2016. The proposed improvements would be addressed under Project #608927; currently in design.
Route 16	Milford	SWAP	3	MassDOT and Milford	Yes	0	3	No data	Yes	MassDOT Project #607428, Resurfacing and intersection improvements on Route 16 (Main Street), from Water Street west to approximately 120 feet west of the Milford/Hopedale town line and the intersection of Route 140; programmed FFY 2019. MassDOT Project #606142, Signal and intersection improvements on Route 16 (Main Street and East Main Street) at six locations; completed in 2013.	3	2	2	4	1	1	13	Medium	This corridor received improvements in 2013 based on a CTPS study, and a MassDOT resurfacing and intersection improvement project was programmed for FFY 2019.
Route 3A	Quincy	ICC	6	MassDOT, DCR, and Quincy	Yes	1	10	Yes	Yes	MassDOT Project #608569, Intersection improvements at Route 3A (Southern Artery) and Broad Street; programmed FFY 2022 TIP. MassDOT Project #605729, Intersection and signal improvements at Hancock Street and East/West Squantum streets; completed in 2015. An FFY 2012 CTPS safety and operations study addressed problems at the Route 3A and Coddington Street intersection.	4	2	2	4	0	1	13	Medium	Route 3A (Hancock Street and Southern Artery) has received several improvement projects and was the focus of a CTPS study. The location was suggested in the 2017 MPO Outreach Program.
Route 28	Randolph	TRIC	6	MassDOT and Randolph	Yes	3	9	Yes	Yes	MassDOT Project #609399, Resurfacing and related work on Route 28; in preliminary design. Arterial Coordination Study, CTPS study (2010).	4	2	2	4	0	1	13	Medium	The location has a potential MassDOT resurfacing project and could benefit from some upgrades for safe accommodations for people walking, biking, or riding bus transit.
Route 114	Salem	NSTF	4	MassDOT and Salem	Yes	0	1	Yes	Yes	MassDOT Project #608521, Bridge Maintenance, North Street (Route 114) over Bridge Street (Route 107) and MBTA; in construction. MassDOT Project #605332, Bridge Replacement (Route 114) North Street over North River; in design stage.	3	2	2	4	1	1	13	Medium	This roadway has had Complete Streets improvements, including sidewalks and bicycle lanes on either side of the roadway. The section that requires improvements to address safety, capacity management and mobility, and accommodate bicycles is between Bridge Street (Route 107) and Route 128.
Route 16	Wellesley	MWRC	6	MassDOT and Wellesley	Yes	0	0	N/A	Yes	MassDOT Project #94762, Bridge Rehabilitation, Br# W-13-014 Route 16 (Washington Street) over Route 9 including relocation of retaining wall; completed.	3	2	2	4	1	1	13	Medium	The location was suggested in 2014 LRTP outreach through verbal comments at a 495/MetroWest Partnership meeting.
Route 3A	Weymouth	SSC	6	MassDOT	Yes	0	1	Yes	Yes	MassDOT Project #608231, Reconstruction of Route 3A including pedestrian and traffic signal improvements; in design. MassDOT Project #604382, Route 3A (Washington Street) Bridge; in construction. MassDOT Project #608483, Work consists of resurfacing on Route 3A; in preliminary design.	2	2	2	4	2	1	13	Medium	A road safety audit was completed for Route 3A in Weymouth in September 2016. The audit identified the problems and needs on the roadway, and suggested short-, medium-, and long-term improvements. MassDOT Project #608321, in design, will address problems and needs identified in the corridor.
Routes 38/129	Wilmington	NSPC	4	MassDOT and Wilmington	Yes	0	3	N/A	Yes	MassDOT Project #608051, Reconstruction of Route 38 from Route 62 to the Woburn city line, add bike lanes, sidewalks, and turn lanes, and upgrade signals; programmed FFY 2024. MassDOT Project #609253, Intersection improvements at Lowell Street (Route 129) and Woburn Street; programmed FFY 2024. MassDOT Project #601732, Rehabilitation, Route 129 (Lowell Street) from Route 38 (Main Street) to Woburn Street; completed in 2009.	2	2	2	4	2	1	13	Medium	Several sections of the arterial have projects that are currently in design. These MassDOT projects would address problems in the corridor.

Arterial Segment	Community	MAPC Subregion	MassDOT District	Jurisdiction	National Highway System	Number of Top-200 High-Crash Locations 2015–17	Number of HSIP-Eligible Crash Clusters 2015–17**	Crowded or Late Bus	In or Near Transportation Equity Priority Area	Study, Project, or TIP Project	Safety Conditions***	Congested Conditions***	Multimodal Significance***	Regional Significance***	Regional Equity***	Implementation Potential***	Score	Priority Rating	Summary of Comments
Route 2/3/3A/16	Cambridge	ICC	6	DCR	Yes	3	4	Yes	Yes	DCR conducted a traffic study of several intersections along Mount Auburn Street and Fresh Pond Parkway, in partnership with the City of Cambridge, MassDOT, and the MBTA. MassDOT Project #608806, Multiuse Path Contruction (Phase II), Create a multiuse greenway on the former B&M railroad right-of-way extending from Concord Avenue in Cambridge through the Fresh Pond Reservation, under Huron Avenue and Mount Auburn Street and into Watertown; this project is in construction. MassDOT Project #609290, Intersection improvements at Fresh Pond Parkway/Gerrys Landing Road, from Brattle Road to Memorial Drive.	3	2	2	4	0	1	12	Medium	DCR and the City of Cambridge studied the portion of the corridor at and south of Mount Auburn Street . The study focused on safety measures, bus prioritization, and accessibility.
Route 2	Concord	MAGIC	4	MassDOT	Yes	0	3	N/A	Yes	MassDOT Project #602984, Crosby's Corner (Route 2 at Route 2A) improvements; completed. MassDOT Project #608015, Reconstruction and widening on Route 2, from Sandy Pond Road to Bridge over MBTA/B&M railroad; in preliminary design MassDOT Project #602091, Concord Rotary; in preliminary design. MassDOT Project #604069, Bridge Replacement over Sudbury River; in preliminary design. MassDOT Project #606223: Bruce Freeman Rail Trail Construction (Phase II-B) in Acton and Concord; in construction.	2	2	2	4	1	1	12	Medium	FFY 2013 Priority Corridors for LRTP Needs Assessment Study (Concord and Lincoln) Route 2 was suggested during MPO outreach as a route experiencing congestion that affects MAGIC communities and Cambridge. There are many projects and studies conducted for this corridor, including the Route 2 (Crosby's Corner) improvements and Concord Rotary upgrade and improvements.
Route 99	Everett	ICC	4	Everett	Yes	0	1	Yes	Yes	MassDOT Project #602383, Reconstructed Route 99 with a traffic signal upgrade, from Second Street to the Malden city line; completed in 2008. MassDOT Project #602382, Reconstructed Route 99 from Sweetser Circle to the Alford Street Bridge in 2013; completed spring 2013.	2	2	3	4	0	1	12	Medium	This roadway is not recommended for study because MassDOT completely reconstructed Route 99 with signal improvements from the Alford Street Bridge to the Malden city line. Route 99 (Lower Broadway) has also received improvements, including pedestrian and bicycle accommodation, as a result of the Encore Boston Harbor mitigation improvements.
Route 3A	Hingham	SSC	5	MassDOT	Yes	0	1	Yes	Yes	MassDOT Project #605168, Improvements on Route 3A from Otis Street/Cole Road including Summer Street and rotary and Rockland Street to George Washington Boulevard; in design.	2	1	2	4	2	1	12	Medium	In FFY 2015, a subregional priority roadway study was conducted for Route 3A in Hingham and Hull. The location received strong support from the Towns of Hingham and Hull, as well as the South Shore Coalition and the MassDOT Highway Division District 5 Office.
Route 28	Milton	ICC and TRIC	6	MassDOT and Milton	Yes	1	3	Yes	Yes	MassDOT Project #607342, Intersection and Signal Improvements at Route 28 (Randolph Avenue) and Chickatawbut Road; programmed FFY 2022. MassDOT Project #609396, Resurfacing and related work on Route 28; programmed FFY 2024. MassDOT Project # 106901, Reconstruction on Route 28 (Randolph Avenue) from Reedsdale Road to Quincy town line; completed in 2008.	4	2	3	3	0	0	12	Medium	This arterial segment was studied in FFY 2020. There are four HSIP intersection clusters in the segment. There is no accommodation for bicycles in the segment, which presents a significant connectivity problem because several of the side streets have bicycle lanes. There are peak period traffic congestion problems that create safety, operations, and mobility issues for the residents. In addition, recommendations from the study could be incorporated into MassDOT Project #609396 or a new project.
Route 114	Peabody	NSTF	4	MassDOT and Peabody	Yes	0	2	Yes	Yes	MassDOT Project # 608567, Improvements at Route 114 at Sylvan Street, Cross Street, Northshore Mall, Loris Road, Route 128 Interchange, and Esquire Drive; in design.	3	2	2	3	1	1	12	Medium	Route 114 in Peabody was listed as a potential corridor in need of signal progression and improvements to accommodate people who walk and bike. However, the arterial segment was not selected because, according to MassDOT Highway District 4, a road safety audit was completed for the segment in August 2016, and a consultant has started design work as part of Project #608567; in design.
Route 16 (Revere Beach Parkway)	Revere	ICC	4	MassDOT	Yes	0	1	Yes	Yes	None	2	2	3	4	0	1	12	Medium	This location is not recommended for study because the Suffolk Downs Redevelopment project is evaluating several scenarios that would affect traffic on Route 16 and Route 1A.
Route 107	Salem	NSTF	4	MassDOT and Salem	Yes	0	1	Yes	Yes	Route 107 Corridor Study in Salem and Lynn; completed in 2016. MassDOT Project #608059, Stormwater improvements along Route 107 (Salem Bypass Road); in construction. MassDOT Project #608650, Adaptive Signal Controls on Route 107 (Highland Avenue); in construction. MassDOT Project #608817, Resurfacing and related work on Route 107; in construction. MassDOT Project #608927, Reconstruction of Route 107; in preliminary design.	3	2	2	4	1	0	12	Medium	The Route 107 corridor in Lynn and Salem was studied in 2016 and many of the recommendations have advanced into MassDOT projects. The proposed improvements would be addressed under Project #608927; currently in design.
Route 1A	Salem	NSTF	4	MassDOT and Salem	Yes	0	0	Yes	Yes	MassDOT Project #605146, Reconstruction of Canal Street from Washington Street and Mill Street to Loring Avenue (Route 1A) and Jefferson Street; completed in 2018. MassDOT Project #601017, Reconstruction of Route 1A (Bridge Street) from the Beverly/Salem Bridge to Washington Street (6,000 feet); completed in 2013.	3	1	2	4	1	1	12	Medium	The southern end of this arterial segment was included in the study of Route 1A at Vinnin Square in Marblehead and in Swampscott; this location was selected as the subject of the FFY 2016 Priority Corridors Study. The intersection of Route 1A and Jefferson Street and Canal Street was reconstructed in 2018.
Route 16	Sherborn	SWAP	3	Sherborn	Yes	0	2	N/A	Yes	None	2	2	1	4	1	2	12	Medium	This location was suggested during 2014 LRTP outreach at a 495/MetroWest Partnership meeting. The section that experiences the most crashes and congestion is in the town center, where Route 16 and Route 27 combine and split.

Arterial Segment	Community	MAPC Subregion	MassDOT District	Jurisdiction	National Highway System	Number of Top-200 High-Crash Locations 2015–17	Number of HSIP-Eligible Crash Clusters 2015–17**	Crowded or Late Bus	In or Near Transportation Equity Priority Area	Study, Project, or TIP Project	Safety Conditions***	Congested Conditions***	Multimodal Significance***	Regional Significance***	Regional Equity***	Implementation Potential***	Score	Priority Rating	Summary of Comments
Route 20	Waltham	ICC	6	MassDOT and Waltham	Yes	0	3	Yes	Yes	City of Waltham Transportation Master Plan, January 2017.	3	2	2	4	0	1	12	Medium	This location had been studied and improvements proposed in the Waltham Transportation Master Plan.
Route 20	Weston	MWRC	6	MassDOT	Yes	0	3	Yes	No	Intersection improvements on Boston Post Road (Route 20) at Wellesley Street; in design stage.	3	2	2	3	1	1	12	Medium	A suggestion to study this location was resubmitted in a comment on the Draft FFY 2014 UPWP and during the 2017 MPO Outreach Program.
Route 60	Arlington	ICC	4	Arlington	Yes	0	1	Yes	Yes	CTPS and MAPC Community Transportation Technical Assistance Program evaluated the high-crash location at the intersection at Massachusetts Avenue in March 2010. MassDOT Project #606885, Reconstructed the intersection of Route 3 and Route 60; completed in 2017.	2	2	3	3	0	1	11	Low	None
Route 16	Holliston	MWRC	3	MassDOT and Holliston	Yes	0	2	No data	No	2011 CTPS study, Route 126 Corridor: Transportation Improvement Study. 2008 CTPS study, Washington Street (Route 16/126) at Hollis Street.	2	1	2	3	1	2	11	Low	This location has MassDOT projects and CTPS studies, which have not been implemented. The 495/MetroWest Partnership expressed interest in a Route 16 study. The section that experiences the most crashes is the town center portion (under Holliston jurisdiction). A road safety audit was performed for the town center portion in December 2012.
Route 60	Medford	ICC	4	Medford	No	0	1	Yes	Yes	None	3	2	3	2	0	1	11	Low	None
Route 138	Milton	ICC and TRIC	6	MassDOT	Yes	0	1	Yes	Yes	MassDOT Project #608484, Roadway Improvements on Route 138; programmed FFY 2020. FFY 2018 LRTP Priority Corridor Study	2	2	2	4	0	1	11	Low	FFY 2018 Priority Corridors for LRTP Needs Assessment Study. MassDOT Project #608484, Roadway Improvements on Route 138, will address problems and needs in the corridor.
Route 9	Newton	ICC	6	MassDOT	Yes	0	4	Yes	Yes	MassDOT Project #608821, Resurfacing and related work on Route 9; in preliminary design. MassDOT Project #604327, Resurfacing and Related Work on Route 9 (Boylston Street) from the Wellesley/Newton city line to Newton/Brookline city line; completed in summer 2012. MassDOT Project #606635, Reconstruction of Highland Avenue, Needham Street, and Charles River Bridge, from Webster Street to Route 9; programmed FFY 2019.	2	2	2	4	0	1	11	Low	According to MassDOT District 6, improvements were recently made to accommodate new developments. An analysis of the new existing conditions would be helpful to compare with the future projected conditions.
Route 129	Reading	NSPC	4	MassDOT and Reading	Yes	0	0	Yes	Yes	No projects	3	1	2	2	2	1	11	Low	None
Route 9	Wellesley	MWRC	6	MassDOT	Yes	0	3	No data	Yes	MassDOT Project #608180, Resurfacing on Route 9, from limit of add-a-lane to east of Overbrook intersection; in construction. MassDOT Project #606530, Drainage improvements along Route 9 Boulder Brook Culvert (design only); in design. MassDOT Project #607340, Resurfacing and related work on Route 9 from Dearborn Street to Natick town line; in preliminary design. MassDOT Project #609402, Resurfacing and related work on Route 9; in preliminary design. MassDOT Project #94762, Bridge Rehabilitation, Route 16 (Washington Street) over Route 9, including relocation of retaining wall; completed summer 2010. MAPC Land Use/Corridor Study (fall 2013).	2	1	2	4	1	1	11	Low	MassDOT Project #609402 has completed a preliminary assessment of this corridor that will develop into 25 percent design plans for roadway improvements. This project is planned to be funded through the 2026 TIP.
Route 1	Westwood	TRIC	6	MassDOT	Yes	0	0	N/A	Yes	MassDOT's I-95 South Corridor Study provided a comprehensive evaluation of the I-95 and Route 1 corridors south of Route 128 and included a recommended plan of short-term and long-term improvements; June 2010. MassDOT Project #603162, Route 128 Add-a-Lane Bridges (Bridge III), Route 1 and 1A over I-95/128; completed in 2012.	2	2	2	4	0	1	11	Low	This arterial segment serves mixed land uses but there are no safe accommodations for people walking or biking as there are no sidewalks in the segment and the existing 6- to 10-foot shoulders need improvements to provide safe environment for people biking. MAPC has been working with the Neponset Valley Transportation Management Association and communities along the Route 1 corridor from Dedham to Foxborough on addressing job/transit access are recommending long-term improvements to make Route 1 corridor more transit, pedestrian, and bicycle friendly.
Route 62	Concord	MAGIC	4	Concord	Yes	0	2	N/A	Yes	MassDOT Project #604646, Reconstruction of Main Street (Route 62) from Water Street to the Acton town line; completed 2010.	2	2	2	2	1	1	10	Low	None

Arterial Segment	Community	MAPC Subregion	MassDOT District	Jurisdiction	National Highway System	Number of Top-200 High-Crash Locations 2015–17	Number of HSIP-Eligible Crash Clusters 2015–17**	Crowded or Late Bus	In or Near Transportation Equity Priority Area	Study, Project, or TIP Project	Safety Conditions***	Congested Conditions***	Multimodal Significance***	Regional Significance***	Regional Equity***	Implementation Potential***	Score	Priority Rating	Summary of Comments
Route 135	Natick	MWRC	3	MassDOT and Natick	Yes	0	1	No data	Yes	MassDOT Project #600573, Reconstructed Route 135 in Natick in 2008. More extensive improvements were proposed in the downtown area, on East Central Street between North Main Street and Union Street, including signal upgrades, new sidewalks, pavement rehabilitation, and shoulders; all construction operations were suspended (as of June 30, 2007). 2010 CTPS study, West Central Street (Route 135) at Speen Street.	3	1	2	2	1	1	10	Low	There is congestion in the downtown area and the likely focus area would be on the intersection of Route 135 at Route 27 and the intersection of Route 135 at Speen Street due to the crash history of those locations.
Route 1	Walpole	TRIC	5	MassDOT	Yes	0	3	N/A	No	MassDOT's I-95 South Corridor Study presented a comprehensive evaluation of the I-95 and Route 1 corridors south of Route 128 and included a recommended plan of short-term and long-term improvements; June 2010. MassDOT Project #608480, Resurfacing and related work on Route 1; programmed FFY 2020.	2	1	3	3	0	1	10	Low	This arterial segment serves mixed land uses but there are no safe accommodations for people walking or biking as there are no sidewalks in the segment and the existing 6- to 10-foot shoulders need improvements to provide safe environment for people biking. MAPC has been working with the Neponset Valley Transportation Management Association and communities along the Route 1 corridor from Dedham to Foxborough on addressing job/transit access. They are recommending long-term improvements to make Route 1 corridor more transit, pedestrian, and bicycle friendly.
Route 117	Bolton	MAGIC	3	Bolton		0	0	N/A	Yes	None	1	1	2	3	1	1	9	Low	None

Notes:

**Number of HSIP-eligible crash clusters
EPDO is a method of combining the number of crashes with the severity of crashes based on a weighted scale. Since 2018, MassDOT applied a new EPDO method (where actual crash costs are factored in) to rank high-crash locations in the state. All of the fatal and injury crashes were weighted together (about 30 percent of all crashes in Massachusetts), which resulted in any crash resulting in an injury (including fatal, incapacitating, non-incapacitating, and possible injuries) having a weighting factor of 21 compared to a crash that resulted in property damage only, which would have a weighting factor of one.

***Selection Criteria
Safety Conditions: Segment has a high crash rate for its functional class, contains an HSIP-eligible crash location, a top-200 high-crash location, and/or a significant number or HSIP-eligible clusters of pedestrian or bicycle crashes.
Congested Conditions: Segment has a Travel Time Index of at least 1.3 and/or of at least 2.0, that is, which signify that it experiences delays during peak periods.
Multimodal Significance: Segment supports transit or bicycle or pedestrian activities, has a need to improve these activities, and/or has a high volume of truck traffic serving regional commerce.
Regional Significance: Segment is in the National Highway System, carries a significant proportion of regional traffic, lies within 0.5 miles of environmental justice transportation analysis zones, and/or is essential for regional economic, cultural, or recreational development in the area.
Regional Equity: Location is in a subregion that has not had a priority corridor study before, or location is in a subregion that has not had a priority corridor study in the last three years.
Implementation Potential: Improvements to the segment are proposed or endorsed by the roadway administrative agency (agencies), proposed or endorsed by the subregion and are a priority for the subregion, and/or have strong support

ADA = Americans with Disabilities Act. BAT = Brockton Area Transit Authority. CTPS = Central Transportation Planning Staff. DCR = Department of Conservation and Recreation. EPDO = Equivalent Property Damage Only. FFY = federal fiscal year. HSIP = Highway Safety Improvement Program. I-95 = Interstate 95. ICC = Inner Core Committee. LRTP = Long-Range Transportation Plan. BOSTON REGION MPO

FIGURE 1
Study Area

Addressing Priority Corridors from the LRTP Needs Assessment
Route 1 in Norwood

The Boston Region Metropolitan Planning Organization (MPO) operates its programs, services, and activities in compliance with federal nondiscrimination laws including Title VI of the Civil Rights Act of 1964 (Title VI), the Civil Rights Restoration Act of 1987, and related statutes and regulations. Title VI prohibits discrimination in federally assisted programs and requires that no person in the United States of America shall, on the grounds of race, color, or national origin (including limited English proficiency), be excluded from participation in, denied the benefits of, or be otherwise subjected to discrimination under any program or activity that receives federal assistance. Related federal nondiscrimination laws administered by the Federal Highway Administration, Federal Transit Administration, or both, prohibit discrimination on the basis of age, sex, and disability. The Boston Region MPO considers these protected populations in its Title VI Programs, consistent with federal interpretation and administration. In addition, the Boston Region MPO provides meaningful access to its programs, services, and activities to individuals with limited English proficiency, in compliance with U.S. Department of Transportation policy and guidance on federal Executive Order 13166.

The Boston Region MPO also complies with the Massachusetts Public Accommodation Law, M.G.L. c 272 sections 92a, 98, 98a, which prohibits making any distinction, discrimination, or restriction in admission to, or treatment in a place of public accommodation based on race, color, religious creed, national origin, sex, sexual orientation, disability, or ancestry. Likewise, the Boston Region MPO complies with the Governor's Executive Order 526, section 4, which requires that all programs, activities, and services provided, performed, licensed, chartered, funded, regulated, or contracted for by the state shall be conducted without unlawful discrimination based on race, color, age, gender, ethnicity, sexual orientation, gender identity or expression, religion, creed, ancestry, national origin, disability, veteran's status (including Vietnam-era veterans), or background.

A complaint form and additional information can be obtained by contacting the MPO or at http://www.bostonmpo.org/mpo_non_discrimination.

Transportation Equity Factors[3]

Area Condition	Yes/No
Low-income Population ≥ 32.32%	No
Minority Population ≥ 28.19%	Yes
More than 6.69% of Population > 75 Years of Age	Yes
More than 16.15% of Households w/o Vehicle	Yes
Within 1/4 Mile of School/College	Yes

Roadway Segment Notes

Detailed Performance Measure Information

Grading Category	Performance Measure	Features of Analyzed Locations
Capacity Management and Mobility	Sidewalk Presence	Large gaps in sidewalk network
	Crosswalk Presence	Roadway with fewer than seven crosswalk per mile
	Walkway Width	Roadway segment with less than half of the sidewalks measuring at least five feet wide
Economic Vitality	Pedestrian Volumes	Roadway segment traversed by five to 60 pedestrians per hour
	Adjacent Bicycle Accommodations	Roadway segments without space for bicycle travel
Safety	Pedestrian Crashes	Roadway segment with two pedestrian crashes
	Pedestrian-Vehicle Buffer	Roadway segments with a 5- to 10-foot buffer
	Vehicle Travel Speed	Roadway segments where average vehicle travel speed is 45 miles per hour or more
System Preservation	Sidewalk Condition	Roadway segments with less than half of sidewalks in good condition

Performance Measure[1]	Percentage	Score (out of 3.0)	Rating
Pedestrian Crashes	60%	2	Fair
Pedestrian-Vehicle Buffer	20%	3	Good
Vehicle Travel Speed	20%	1	Poor
GRADING CATEGORY TOTAL[2] (Pedestrian Crashes Score * 0.6) + (Pedestrian-Vehicle Buffer Score * 0.2) + (Vehicle Travel Speed Score * 0.2)	**100%**	**2.0**	**Fair**

System Preservation

Performance Measure[1]	Percentage	Score (out of 3.0)	Rating
Sidewalk Condition	100%	3.0	Good

Transportation Equity Factors[3]

Area Condition	Yes/No
Low-income Population ≥ 32.32%	No
Minority Population ≥ 28.19%	Yes
More than 6.69% of Population > 75 Years of Age	Yes
More than 16.15% of Households w/o Vehicle	Yes
Within 1/4 Mile of School/College	Yes

Roadway Segment Notes

Detailed Performance Measure Information

Grading Category	Performance Measure	Features of Analyzed Locations
Capacity Management and Mobility	Sidewalk Presence	Propose improvements close all gaps in sidewalk network
	Crosswalk Presence	Propose improvements adds new crossing opportunities where needed
	Walkway Width	Proposed improvements recommend upgrading sidewalks to MassDOT standards
Economic Vitality	Pedestrian Volumes	Roadway segment traversed by five to 60 pedestrians per hour
	Adjacent Bicycle Accommodations	Proposed improvements add sidewalk-level or street-level separated bike lanes in the study corridor
Safety	Pedestrian Crashes	Proposed improvements improves accommodations for people who walk or bike
	Pedestrian-Vehicle Buffer	Proposed improvements add separated bike lanes on Route 1
	Vehicle Travel Speed	Roadway segments where average vehicle travel speed is 45 miles per hour or more
System Preservation	Sidewalk Condition	Proposed improvements add new sidewalks on Route 1

18.2%+ of Population < 16 Years Old	Yes
16.15%+ of Households w/o Vehicle	Yes
Within 1/4 Mile of School/College	Yes

Notes

Detailed Performance Measure Information

Goal	Performance Measure	Features of Analyzed Locations
Capacity Management and Mobility	Bicycle Facility Presence	None in the corridor, people biking mostly stay on the shoulder
	Proximity to Bike Network	No bicycle facility within one-quarter mile
	Proximity to Transit	Yes, bus route 34E, commuter rail stations Norwood Center, Norwood Depot, and University Station are within one-half mile of the study area
Economic Vitality	Bike Rack Presence	None in the corridor
	Land Use	Land uses in the corridor, including commercial and retail, residential, and recreational, would support biking
Safety	Bicycle Facility Presence	None in the corridor
	Absence of Bicycle Crashes	Two bicycle crashes in five years (2014–19)
	Bicyclist Operating Space	People biking mostly stay on the shoulder, but sometimes have to share lane with vehicles at locations where a right-turn lane uses up the shoulder
	Number of Travel Lanes	Two travel lanes each direction
System Preservation	Bicycle Facility Continuity	No bicycle facility
	Bicycle Facility Condition	No bicycle facility

TITLE SHEET

THE COMMONWEALTH OF MASSACHUSETTS
MASSACHUSETTS HIGHWAY DEPARTMENT

TRAFFIC SIGNAL LAYOUT PLAN AND PERMIT
PROVIDENCE HIGHWAY (ROUTE 1) AT UNION STREET

IN THE TOWN OF

NORWOOD
NORFOLK COUNTY

Under authority of Chapter 89, Sec. 8 General Laws, Tercentenary Edition, the Massachusetts Highway Department hereby approves the following described traffic control signal installation, and auxiliary signs and surface markings, for the above location, provided that a permit for the opening of the road and the placing of structures thereon shall be received from the board or officer in charge of the road.

This permit is granted for the specific signal installation described herein and for its operation in accordance with the conditions set forth below and with the requirements of the Massachusetts Highway Department. The details for any material alterations or any continued* or substantial departure from the provisions of this permit must be submitted to the department for approval with data sufficient to justify such modification. Failure to comply with these requirements automatically voids this permit during such time as non–compliance exists.

I. STANDARDS OF INSTALLATION

The traffic control signal installation and all auxiliary signs and surface markings which are used in connection with such installation shall conform with the requirements of the Massachusetts Highway Department and with the sketch which is attached.

II. OPERATION OF SIGNALS

(a) Type of control: AUTOMATIC
(b) Coordination: NONE
(c) Special connection: NONE
(d) Timing for automatic operation: SEE SHEET NO. 3
(e) Hours for Automatic Operation: CONTINUOUS
Signals may be operated automatically for a shorter period of time but not for a greater length of time than is here indicated except when unusual conditions arise which temporarily justify longer operation.
(f) Flashing Operation: Whenever a signal is not operating as a control device (stop and go), it must Flash Yellow or Flash Red as set forth in the signal sequence and at the rate of 50–60 flashes per minute unless otherwise specified in Part II(e) of this Permit.
(g) Manual Operation: Signals may be operated manually at any time irrespective of the hours designated in Part II(3) of this permit
(h) Discontinuance: Signals may be discontinued at any time. When this is done signal faces must be turned away from traffic, taken down or hooded, and the District Highway Engineer notified.

	Necessary duct, cable, labor, miscellaneous
	material and equipment to complete the installation.

NOTES:

SEQUENCE AND TIMING NOTES:

1. ø7 AND ø8 NOT USED.

NEMA DUAL RING PHASING NOTES:

1. PHASES ASSOCIATED BY A SOLID LINE SHALL NOT OPERATE CONCURRENTLY.
2. PHASES ASSOCIATED BY A DASHED LINE MAY OPERATE CONCURRENTLY.
3. THROUGH MOVEMENTS MAY INCLUDE RIGHT TURNS.
4. IF THE ASSIGNED RIGHT OF WAY FOR ANY TRAFFIC MOVEMENT IS TO REMAIN IN EFFECT DURING THE NEXT CALLED PHASE, THE SIGNAL INDICATIONS FOR THAT TRAFFIC MOVEMENT SHALL NOT CHANGE DURING THE CHANGE INTERVAL(S) UNLESS OTHERWISE NOTED.

LOOP DETECTOR NOTES:

1. SEE LOOP DETECTOR DETAIL SHEET FROM DESIGN DOCUMENT FOR SPLICE PATTERN AND OTHER INFORMATION.
2. DELAY AND EXTENSION TIMES ARE IN SECONDS.
3. DELAY TIME SHALL BE EFFECTIVE ONLY DURING THE RED PORTION OF THE PHASE THAT IS CALLED BY THE DETECTOR.

DRAFT

Pursuant to MASS. GEN. LAWS c. 85, § 2 the Massachusetts Department of Transportation ("MassDOT") hereby approves the following described traffic control signal installation and auxiliary signs and surface markings for the above captioned location, provided that a permit for the opening of the road and the placing of structures thereon shall be received from the board or officer in charge of the road.

This Regulation is granted for the specific signal installation described herein and for its operation in accordance with the conditions set forth below and with the requirements of the MassDOT. The details for any materials, alterations, or any continued* or substantial departure from the provisions of this Regulation must be submitted to the MassDOT for approval with data sufficient to justify such modification. Failure to comply with the requirements and standards set forth by the MassDOT shall automatically void this Regulation during such time as non-compliance exists.

I. STANDARDS OF INSTALLATION

The traffic control signal installation and all auxiliary sign and surface markings which are used in conjunction with such installation shall conform with the requirements of the MassDOT and with the attached sketch.

II. OPERATION OF SIGNALS

1.	Traffic Control.....	Fully Actuated
2.	Coordination.....	None
3.	Special Connections.....	N/A
4.	Timing for Automatic Operations....	*See Attached*
5.	Hours for Automatic Operation.....	Signals shall be operated in stop and go mode continuously unless unusual or emergency conditions arise which temporarily justify flashing operations or manual override.
6.	Flashing Operation.....	Whenever a signal is not operating as traffic control device (stop and go), it must Flash Yellow or Flash Red as set forth in the accompanying timing and sequence chart for emergency operation. The flashing rate must conform to the latest edition of the Manual on Uniform Traffic Control Devices (MUTCD).
7.	Manual Operation.....	Signals may be operated manually at any time irrespective of the hours designated in Part II (5) of this Regulation.
8.	Discontinuance.....	Upon proper justification signals can be discontinued. If required and justified, appropriate alternate traffic controls must be installed prior to discontinuance of signals. Discontinued signal faces must be turned away from traffic, taken down or covered and the District Highway Director notified.

Issuance of this Regulation Supersedes and Terminates:

WORLDTECH ENGINEERING

JOB: Charles River Realty Development
SHEET NO: 1 OF: 1
CALCULATED BY: AP DATE: 22-Feb-18
CHECKED BY: MP DATE:
PROJECT#: 17-009.01
LOCATION: Boston Providence Highway at Sumner Street, Norwood, MA

CLEARANCE INTERVAL CALCULATIONS:

The general formula for determining the yellow warning interval is the following:

I. YELLOW CLEARANCE

$$y = t + \frac{1.47v}{2a + 2Gg}$$

Where: y= Length of Yellow warning interval, to the nearest 0.1 Seconds
t= Driver perception and reaction time recommended 1.0 Seconds
v= Velocity of approaching vehicle in mph
a= Deceleration rate, recommended 10 ft./sec^2
g= Acceleration due to gravity, 32 ft/sec^2
G= Grade of approach, in percent divided by 100 (negative for downhill grade)

II. ALL RED CLEARANCE

$$r = \frac{W + L}{1.47v} - 1$$

Where: r= Length of red clearance interval
W= Width of intersection, in feet measured from the near side stop line to the far edge of the conflicting traffic lane along the actual vehicle path.
L= Length of vehicle = 20 feet

II. PEDESTRIAN CLEARANCE

The pedestrian clearance time (pedestrian change interval/"Flashing Don't Walk" + pedestrian buffer interval/"Don't Walk/All Red") should be sufficient to allow a pedestrian to cross from the curb to the far side of the traveled way at 3.5 fps.
Concurrent phasing - The buffer interval should be at least 3 seconds and consist of all or part of the yellow clearance interval.
Exclusive phasing - The pedestrian change interval should be 4 seconds less than the minimum pedestrian clearance time. The remaining 4 seconds should be applied to an all-red clearance interval during which a steady upraised hand indication should be displayed.
The total of the WALK interval and pedestrian clearance time should be sufficient to allow a pedestrian crossing in the crosswalk who left the pedestrian detector at the beginning of the WALK interval to travel to the far side of the traveled way at 3.0 fps.

TITLE SHEET

THE COMMONWEALTH OF MASSACHUSETTS
MASSACHUSETTS HIGHWAY DEPARTMENT

TRAFFIC SIGNAL LAYOUT PLAN AND PERMIT
PROVIDENCE HIGHWAY (ROUTE 1) AT MORSE STREET

IN THE TOWN OF

NORWOOD
NORFOLK COUNTY

Under authority of Chapter 89, Sec. 8 General Laws, Tercentenary Edition, the Massachusetts Highway Department hereby approves the following described traffic control signal installation, and auxiliary signs and surface markings, for the above location, provided that a permit for the opening of the road and the placing of structures thereon shall be received from the board or officer in charge of the road.

This permit is granted for the specific signal installation described herein and for its operation in accordance with the conditions set forth below and with the requirements of the Massachusetts Highway Department. The details for any material alterations or any continued* or substantial departure from the provisions of this permit must be submitted to the department for approval with data sufficient to justify such modification. Failure to comply with these requirements automatically voids this permit during such time as non–compliance exists.

I. STANDARDS OF INSTALLATION

The traffic control signal installation and all auxiliary signs and surface markings which are used in connection with such installation shall conform with the requirements of the Massachusetts Highway Department and with the sketch which is attached.

II. OPERATION OF SIGNALS

(a) Type of control: AUTOMATIC
(b) Coordination: COORDINATED
(c) Special connection: NONE
(d) Timing for automatic operation: SEE SHEET NO. 3
(e) Hours for Automatic Operation: CONTINUOUS
Signals may be operated automatically for a shorter period of time but not for a greater length of time than is here indicated except when unusual conditions arise which temporarily justify longer operation.
(f) Flashing Operation: Whenever a signal is not operating as a control device (stop and go), it must Flash Yellow or Flash Red as set forth in the signal sequence and at the rate of 50–60 flashes per minute unless otherwise specified in Part II(e) of this Permit.
(g) Manual Operation: Signals may be operated manually at any time irrespective of the hours designated in Part II(3) of this permit
(h) Discontinuance: Signals may be discontinued at any time. When this is done signal faces must be turned away from traffic, taken down or hooded, and the District Highway Engineer notified.

CONSTRUCTION NOTES:

1. REMOVE ALL EXISTING TS EQUIPMENT, AND ABANDON ALL TS CONDUIT UNLESS OTHERWISE NOTED.
2. ALL TS CONDUIT SHALL BE 75mm UNLESS OTHERWISE NOTED.
3. EACH LOOP GROUP SHALL BE SPLICED IN SINGLE PULL BOX AND WIRED TO SEPARATE CONTROLLER INPUT.
4. PULL BOXES SHALL BE ADJACENT TO CURB UNLESS OTHERWISE NOTED AND SHALL NOT BE LOCATED IN WHEELCHAIR RAMPS.
5. ALL PAVEMENT MARKINGS SHALL BE THERMOPLASTIC.
6. WHERE EXISTING PAVEMENT MARKINGS ARE DIFFERENT THAN PROPOSED MARKINGS SHOWN, REMOVE BY APPROVED METHOD.
7. TRAFFIC SIGNAL FOUNDATIONS TO BE LOCATED BY STATION AND OFFSET.
8. THE TOP OF ALL MAST ARM & STRAIN POLE FOUNDATIONS IN SIDEWALK AREAS SHALL BE LOCATED 75mm± BELOW FINISH GRADE. THE TOP OF THE FOUNDATION SHALL NOT BE EXPOSED TO THE SIDEWALK. THE TOP OF ALL MAST ARM & STRAIN POLE FOUNDATIONS IN GRASSY AREAS SHALL BE LOCATED 50mm± ABOVE FINISHED GRADE.
9. ALL EXISTING SIGNS WITHIN THE PROJECT LIMITS SHALL BE R&S UNLESS OTHERWISE INDICATED.
10. THE PRE-EMPTION STROBES SHALL BE WIRED SEPERATELY AND NOT UTILIZE SPARE TRAFFIC SIGNAL CONDUCTORS.
11. SEE SHEETS 31 & 32 FOR TRAFFIC SIGNAL DATA.

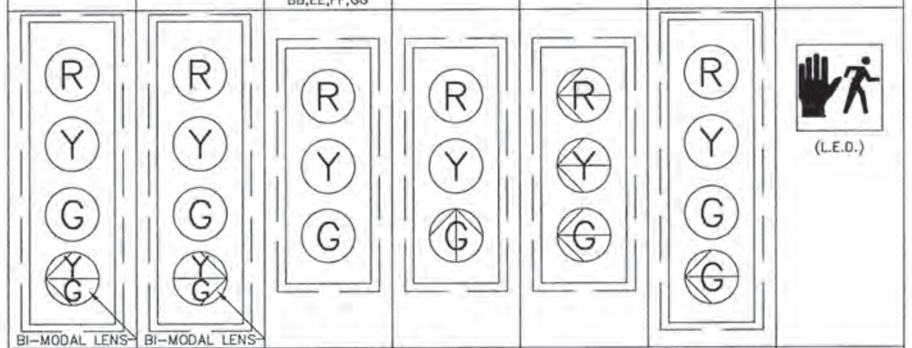
SHEET 31 OF 47

SIGNAL HEAD DATA

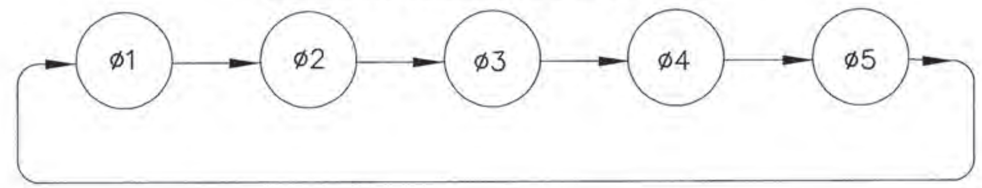
P	Z	A,B,E,F,H,K, M,N,Q,R,W, BB,EE,FF,GG	U,V,CC,DD	C,D,L,X	G,J,Y,AA	P1–P10



ALL 300mm LENS

NOTES: 1. ALL SIGNAL HEADS SHALL BE EQUIPPED WITH 125mm ± LOUVERED BACKPLATES.
2. ALL SIGNAL DISPLAYS SHALL BE EQUIPPED W/L.E.D. MODULES.

PREFERENTIAL PHASE SEQUENCE



SEQUENCE & TIMING NOTES:

1. IF THE ASSIGNED RIGHT OF WAY FOR ANY TRAFFIC MOVEMENT IS TO REMAIN IN EFFECT DURING THE NEXT CALLED PHASE, THE SIGNAL INDICATIONS FOR THAT TRAFFIC MOVEMENT WILL NOT CHANGE DURING THE CLEARANCE INTERVAL.
2. THE RIGHT OF WAY MAY BE ASSIGNED TO ANY PHASE, OR ANY COMBINATION OF NON-CONFLICTING PHASES.
3. IF CALLS EXIST ON ALL PHASES, THE ASSIGNMENT OF RIGHT OF WAY SHALL BE IN ACCORDANCE WITH THE PREFERENTIAL PHASE SEQUENCE.
4. IF THE ASSIGNED RIGHT-OF-WAY FOR ANY TRAFFIC MOVEMENT IS TO CHANGE DURING THE NEXT CALLED PHASE, THE SIGNAL INDICATION FOR THAT MOVEMENT WILL DISPLAY THE APPROPRIATE CLEARANCE INTERVALS.

EMERGENCY VEHICLE PRE-EMPTION OPERATION.

1. EMERGENCY VEHICLE PRE-EMPTION SIGNALS SHALL BE OPTICALLY TRANSMITTED BY OPTICAL EMITTERS MOUNTED IN EMERGENCY VEHICLES AND RECEIVED BY OPTICAL DETECTORS LOCATED AT EACH INTERSECTION.
2. PRE-EMPTION SIGNALS SHALL BE SERVICED ON A PRIORITY BASIS WITH DETECTORS D1, D2, D3, D4, D5, OR D6 ASSIGNED DESCENDING PRIORITIES AS FOLLOWS: (D1 HIGHEST AND D6 LOWEST)
3. IN RESPONSE TO A PRE-EMPTION SIGNAL RECEIVED AT AN INTERSECTION BY OPTICAL DETECTOR D1 (OR D2, D3, D4, D5, D6) THE CONTROLLER SHALL HOLD OR ADVANCE TO AND HOLD IN EMERGENCY VEHICLE PRE-EMPTION PHASE #1 (OR #2, #3, #4, #5, #6) GREEN FOR A MINIMUM OF TEN (10) SECONDS OR UNTIL PRE-EMPTION SIGNAL CEASES. THE CONTROLLER SHALL THEN TIME PRE-EMPTION PHASE CLEARANCE (4 SECONDS: YELLOW AND 1 SECOND: ALL RED) AND SERVICE PRE-EMPTION PHASE #2 (OR #1) IF NECESSARY, THEN TIME PRE-EMPTION EMERGENCY VEHICLE PHASE CLEARANCE AND RESUME NORMAL SIGNAL OPERATION. EMERGENCY VEHICLE PRE-EMPTION PHASE #3, #4, #5, AND #6 SHALL BE SIMILARLY SERVED.
4. MINIMUM GREEN, NORMAL VEHICLE CLEARANCE, SHALL BE PROVIDED ON PHASES THAT ARE TO BE TERMINATED BY PRE-EMPTION DEMAND.
5. PRE-EMPTION STROBE SHALL BE ILLUMINATED WHENEVER ANY EMERGENCY VEHICLE PRE-EMPTION GREEN IS ON.
6. DURING PRE-EMPTION, PEDESTRIAN MOVEMENTS SHALL NOT BE ACTIVE.

ITEM 816.01
TRAFFIC SIGNAL RECONSTRUCTION
BOSTON PROVIDENCE HIGHWAY (U.S. RTE 1) AT DEAN STREET/U.S. RTE 1 RAMPS

3	EMERGENCY PRE-EMPTION STROBE (WHITE LENS)
1	SERVICE CONNECTION (OVERHEAD)

PLUS NECESSARY DUCT, CABLE, LABOR, MISCELLANEOUS MATERIAL AND EQUIPMENT TO COMPLETE THE INSTALLATION AND PROVIDE AN OPERATING TRAFFIC CONTROL SIGNAL.

NOTE 1: CONTRACTOR SHALL PROVIDE ONE SPARE CONTROLLER & CABINET ASSEMBLY, WITH ASSOCIATED EQUIPMENT, READY FOR FUTURE INSTALLATION (BY OTHERS). THE SPARE CONTROLLER & CABINET ASSEMBLY SHALL BE OF THE SAME MAKE/MODEL AS THE CONTROLLER & CABINET ASSEMBLY TO BE INSTALLED UNDER THIS CONTRACT, AND SHALL REFLECT THE SAME PHASING/TIMING/SETTINGS SHOWN ON THESE PLANS. ANY ADJUSTMENTS (i.e., TIMING CHANGES) AND/OR MODIFICATIONS MADE TO THE CONTROLLER AND/OR CABINET ASSEMBLY INSTALLED IN THE FIELD DURING THE INSTALLATION AND INSPECTION SHALL ALSO BE REFLECTED IN THE SPARE CONTROLLER & CABINET ASSEMBLY, BY THE CONTRACTOR. UPON FINAL ACCEPTANCE OF THE TRAFFIC SIGNAL SYSTEM BY MASSHIGHWAY, THE CONTRACTOR SHALL DELIVER THIS SPARE CONTROLLER & CABINET ASSEMBLY TO THE NEAREST MASSHIGHWAY DISTRICT 5 MAINTENANCE YARD. THE CONTRACTOR SHALL NOTIFY THE ENGINEER AND MASSHIGHWAY 24 HOURS IN ADVANCE OF ANY DELIVERIES. THE CONTRACTOR SHALL UNLOAD AND STACK MATERIAL IN A CAREFUL MANNER TO PREVENT DAMAGE.

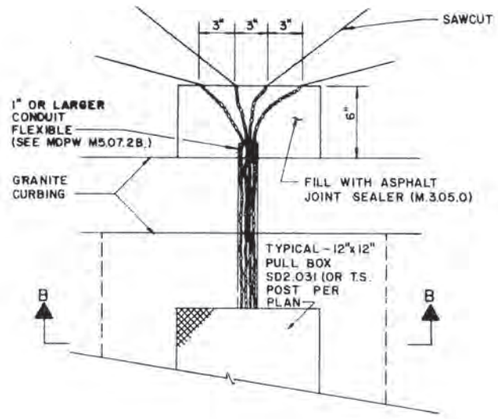
PLAN OF SEGMENTED DETECTOR DETAIL
NOT TO SCALE



DETAIL - PLAN VIEW
NOT TO SCALE

DETECTOR NOTES

1. IN BASE OR HANDHOLE, SPLICE ALL SEGMENTS TO TYPE II-SHIELDED LOOP DETECTOR LEAD-IN CABLE. SEGMENTS SHALL BE SPLICED IN IN PARALLEL, IN SERIES, OR IN A COMBINATION OF PARALLEL & SERIES AS SHOWN ON THE PLAN SHEET FOR EACH DETECTOR. NUMBER OF TURNS OF WIRE SHALL ALSO BE AS SHOWN ON THE PLAN SHEET FOR EACH DETECTOR. SEE NOTE 12.
2. SEE SPECIAL PROVISIONS FOR REQUIREMENTS OF DETECTOR AMPLIFIER.
3. LEAD-IN WIRES SHALL BE TWISTED FROM SEGMENT TO SPLICE WITH SHIELDED CABLE. FIVE TURNS PER FOOT. LEAD-IN SHALL BE TYPE II (M8.16.11).
4. BEFOPE STARTING ANY SPLICING THE ELECTRICAL CONTRACTOR SHALL FURNISH DATA SHEETS ON THE MATERIALS AND/OR METHODS TO BE USED IN ACCORDANCE WITH THE DEPARTMENTS STANDARD OPERATING PROCEDURES FOR APPROVAL OF SHOP DRAWINGS. SEE SECTION 815.64, ESPECIALLY PARAGRAPH 1.
5. THE METALLIC SHIELD WHICH SHALL ENCASE THE DETECTOR LEADS FROM A SPLICE (TYPICALLY LOCATED IN A PULL BOX NEAR THE ROAD WAY COMPONENT OF THE DETECTOR) TO THE CONTROLLER, AND THE DRAIN WIRE UNDER THE METALLIC SHIELD, SHALL BE FIRMLY BONDED TO THE EARTH GROUNDING BUS IN THE CONTROLLER. HOWEVER, THE SHIELD AND DRAIN WIRE SHALL BE CAREFULLY INSULATED FROM THE TRANSFORMER NEUTRAL OR FROM EARTH GROUND AT ALL OTHER POINTS ALONG ITS LENGTH. SPECIFICALLY, THIS INCLUDES CAREFUL INSULATION OF THE EXPOSED PORTION OF THE SHIELD AND THE DRAIN WIRE AT THE END AWAY FROM THE CONTROLLER WHERE IT IS SPLICED TO WIRES LEADING TO THE ROADWAY COMPONENT OF THE DETECTOR. THIS IS IMPORTANT TO AVOID A GROUND RETURN LOOP.
6. FILL ALL CONDUIT OPENINGS WITH DUCT SEAL.
7. AFTER SAW CUTS ARE COMPLETE, BLOW OUT OIL AND WATER WITH FREE COMPRESSED AIR UNTIL CUTS ARE CLEAN AND DRY. INSERT WIRE INTO CLEAN SLOT WITH A BLUNT, SMOOTH, ROUND EDGED TOOL OF WOOD OR PLASTIC SUCH AS A PAINT STIRRER, DO NOT USE A SCREWDRIVER. THEN INSERT FOAM PLASTIC HOLD DOWN STRIPS, SIMILAR TO ETHA FOAM 5B. STRIPS SHALL BE ABOUT 2" LONG, PLACED IN THE SLOT ABOUT EVERY 2 FEET. THEN POUR SEALER, TAKING CARE TO ELIMINATE BUBBLES.
8. THE COMBINED ROADWAY LOOP, TWISTED LEAD-IN WIRES, SPLICE AND SHIELDED LEAD-IN CABLE SHALL HAVE A RESISTANCE TO GROUND OF AT LEAST 100 MEGOHMS. SEE SPECIAL PROVISIONS FOR ADDITIONAL REQUIREMENTS.
9. FOR INSTALLATION OF SINGLE (ONE SEGMENT) SMALL WIRE LOOP DETECTOR. DETAIL IS THE SAME.
10. CUT LOOPS IN BINDER AND FILL WITH APPROVED FLEXIBLE SEALER.
11. DETECTOR WIRE SHALL BE A DIFFERENT COLOR FOR EACH SEGMENT OF A DETECTOR GROUP. SEE DETAIL.
12. SPLICING PATTERN P= SERIES/PARALLEL: SPLICE SEGMENTS 1 AND 3 OF AN INDIVIDUAL DETECTOR IN SERIES. SPLICE SEGMENTS 2 AND 4 IN SERIES. SPLICE THE RESULTANT TWO GROUPS IN PARALLEL. SPLICE THE RESULTANT COMBINATION TO ONE LEAD-IN CABLE. CONNECT THIS CABLE TO AN OTHERWISE UNUSED AMPLIFIER CHANNEL.

   SPLICING PATTERN S=SERIES: SPLICE ALL SEGMENTS (TYPICALLY FOUR, BUT MAY BE LESS) OF AN INDIVIDUAL DETECTOR IN SERIES. SPLICE THE RESULTANT COMBINATION TO ONE LEAD-IN CABLE TO AN OTHERWISE UNUSED AMPLIFIER CHANNEL.

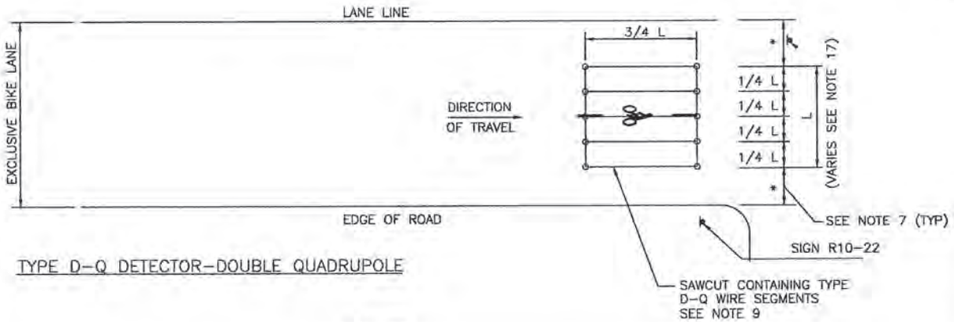
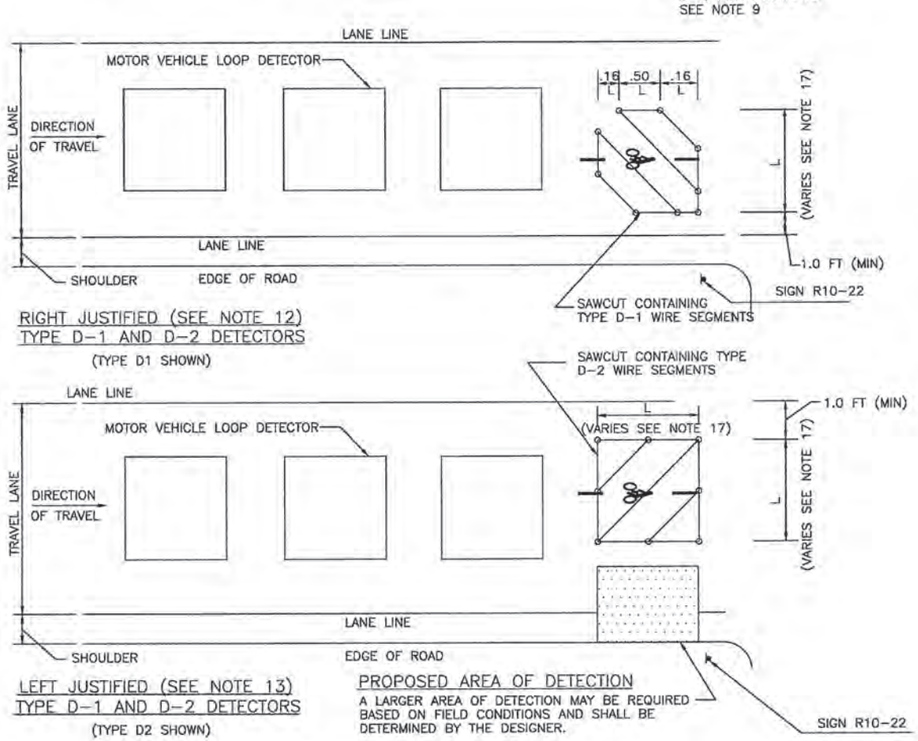
TYPE Q DETECTOR-STANDARD QUADRUPOLE
WITH STANDARD PAVEMENT MARKINGS AND SIGNING



TYPE D-Q DETECTOR-DOUBLE QUADRUPOLE



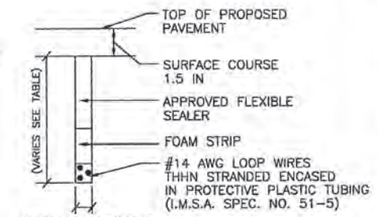
RIGHT JUSTIFIED (SEE NOTE 12)
TYPE D-1 AND D-2 DETECTORS
(TYPE D1 SHOWN)

LEFT JUSTIFIED (SEE NOTE 13)
TYPE D-1 AND D-2 DETECTORS
(TYPE D2 SHOWN)

PROPOSED AREA OF DETECTION
A LARGER AREA OF DETECTION MAY BE REQUIRED BASED ON FIELD CONDITIONS AND SHALL BE DETERMINED BY THE DESIGNER.

SIGN R10-22

NOTE: ALL SIGN DIMENSIONS IN INCHES
NOTE: SIGN PANEL NOT SHOWN TO SCALE



SECTION THRU LOOP DETECTOR

SAWCUT SLOT DEPTH GUIDE		
TURNS OF WIRE	SLOT SIZE	
	DEPTH (IN)	WIDTH (IN)
1	1.5	0.5
2	1.5	0.5
3	1.5	0.5
4	2.0	0.5
5	2.0	0.5
6	2.0	0.5
7	2.0	0.5
8	2.0	0.5

NOTES:

1. REFER TO VEHICLE LOOP DETECTOR DETAIL SHEET FOR ADDITIONAL NOTES AND CONSTRUCTION DETAILS.
2. ALL DETAILS ARE GRAPHICAL WITH NO SCALE.
3. THE NUMBER, SIZE, LOCATION AND LENGTH OF DETECTION AREA VARIES AND SHALL BE DETERMINED BY THE DESIGNER REFER TO TRAFFIC SIGNAL PLAN.
4. BICYCLE LOOPS SHALL BE CONNECTED TO SEPARATE LOOP DETECTOR AMPLIFIERS CAPABLE OF HIGHER LEVELS OF SENSITIVITY.
5. BICYCLE LOOPS SHALL BE INSTALLED IN THE BASE COURSE OF EXISTING PAVEMENT. THE EXISTING PAVEMENT SHALL BE COLD PLANED TO THE BASE COURSE AND SAWCUT FOR LOOP INSTALLATION.
6. SIGNS AND PAVEMENT MARKINGS SHALL BE INSTALLED FOR ALL BICYCLE DETECTORS TO INFORM CYCLISTS OF THE DETECTION AREA.
7. * OFFSETS FROM LANE LINE EQUAL UNLESS OTHERWISE NOTED. SEE PLANS.
8. TYPE Q DETECTORS SHALL BE WIRED IN A FIGURE EIGHT PATTERN WITH A DOUBLE LAYER DESIGN ("2-4-2") WITH 2 TURNS IN THE PERIMETER SLOTS AND 4 TURNS IN THE CENTER SLOT AS SHOWN IN THE WINDING DETAIL.
9. BICYCLES WILL BE DETECTED WITHIN 4 IN. OF THE INTERIOR LONGITUDINAL LOOP WIRES FOR TYPE Q AND D-Q DETECTORS.
10. PROVIDE 3 TURNS FOR TYPE D-1 DETECTORS.
11. INSTALL 2 LAYERS OF WIRE WOUND IN THE SAME DIRECTION IN BOTH LAYERS FOR TYPE D-2 DETECTORS. THE RESULT IS 4 TURNS IN EACH DIAGONAL.
12. RIGHT JUSTIFIED LOOP DETECTORS SHALL BE CONSIDERED FOR THE FOLLOWING CONDITIONS:
    a) BICYCLE STOPPING ON THE RIGHT SIDE OF A THRU TRAVEL LANE.
    b) BICYCLE STOPPING ON THE RIGHT SIDE OF AN EXCLUSIVE LEFT TURN LANE.
13. LEFT JUSTIFIED LOOP DETECTORS SHALL BE CONSIDERED FOR THE FOLLOWING CONDITIONS:
    a) BICYCLE STOPPING ON THE LEFT SIDE OF A SHARED LEFT/THRU LANE.
    b) BICYCLE STOPPING JUST TO THE RIGHT OF THE CENTERLINE WHEN TURNING LEFT ON A TWO-LANE ROADWAY.
14. RECTANGULAR LOOP DETECTORS SHALL BE CONSIDERED FOR BICYCLES STOPPING ON EITHER THE LEFT OR RIGHT SIDE OF A TWO-LANE ROADWAY. THE MINIMUM OFFSET FROM LANE LINE OR CURB LINE SHALL BE 1.0 FT.
15. PAVEMENT CORES OR TEST PITS MAY BE REQUIRED TO DETERMINE THE DEPTH OF EXISTING PAVEMENT AND CONFIRM THAT THE DETECTION OPTION CHOSEN AND CORRESPONDING WINDING PATTERN CAN BE ACCOMMODATED.
16. THESE DETAILS APPLY TO BICYCLE LOOPS INSTALLED IN ROADWAYS. PUSH BUTTON ACTUATION SHALL BE CONSIDERED FOR RECREATIONAL BIKE PATHS.
17. THE MINIMUM DIMENSION FOR L SHALL BE 6 FT MIN. FOR DETECTORS TYPE D-Q, D-1 & D-2. FINAL DIMENSIONS SHALL BE DETERMINED BY THE DESIGN ENGINEER.

THIS PLAN NOT DESIGNED BY
VANASSE HANGEN BRUSTLIN, INC.

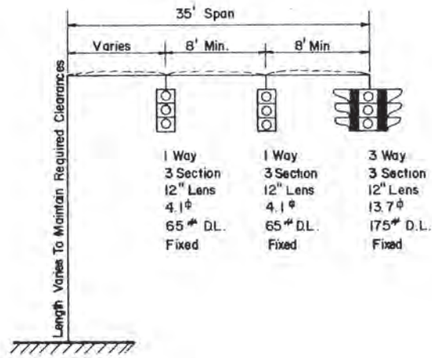
FOUNDATION DESIGN CHART



NORWOOD
DEAN STREET/ROUTE 1
MAST ARM DETAILS
SHEET 37 OF 47

GENERAL NOTES:

1. Foundations Shall Be Class "A" Cement Concrete Masonry.
2. Reinforcement Shall Be A.S.T.M. A615-Gr. 60.
3. Bolt Circle And Anchor Bolts To Be Provided By The Contractor The Anchor Bolts Shall Be Supplied With A Template For Setting The Bolts And Necessary Bolt Projections
4. Provide For Electrical Conduit As Required.
5. Excavation Shall Be By The Auger Method To The Neat Lines Of The Outside Dimension Of The Foundation Without Disturbing The Soil Around And Below The Proposed Foundation Bottom. Alternate Methods Of Excavation May Be Submitted For Approval If They Meet The Requirements Listed In The General Notes Of Sheets 3 & 4 Of The Span Wire Assembly Foundation Details & Design Charts.
6. If The Soil Is Disturbed Or Removed Beyond The Neat Lines Of The Outside Dimension Of The Foundation As Specified, It Shall Be Replaced With Concrete. Any Additional Cost For The Concrete Shall Be Paid For By The Contractor
7. Determination Of Existing Soil Conditions Shall Be Made By The Design Engineer
8. Vertical Reinforcement Bars Are To Be Evenly Spaced In The Foundation As Shown
9. The Smallest Diameter Foundation Shall Be Used That Will Meet The Moment Requirement And Be At Least 16" Greater In Diameter Than The Bolt Circle Diameter
10. If A Poor Soil Or Ledge Is Encountered, (i.e., One Which Does Not Apply To The Design Charts Shown On This Sheet), An Alternative Design Shall Be Developed By The Design Engineer. Decisions Made In Notes #7 & #10, Shall Be Submitted To The M.D.P.W. For Approval. If Utilities Or Other Underground Obstructions Are Encountered, The Contractor Shall Backfill The Area To Its Original Condition Until An Alternate Design Has Been Provided By The Design Engineer.
11. The Foundations Shown On This Drawing Are For A 35-Foot Cantilevered Type II Mast Arm Carrying A Three Way, Three Section, Twelve Inch (12") Lens Traffic Signal Housing Fixed At The End Of The Arm, And A One-Way, Three-Section, Twelve Inch (12") Lens Traffic Signal Fixed Twelve Feet (12') Away, And Another One-Way, Three-Section Twelve Inch (12") Lens Traffic Signal Fixed Twelve Feet (12') Away From That.

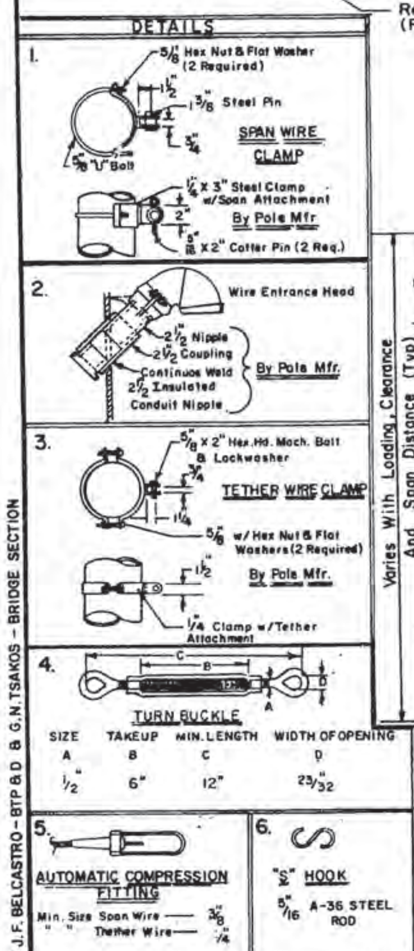
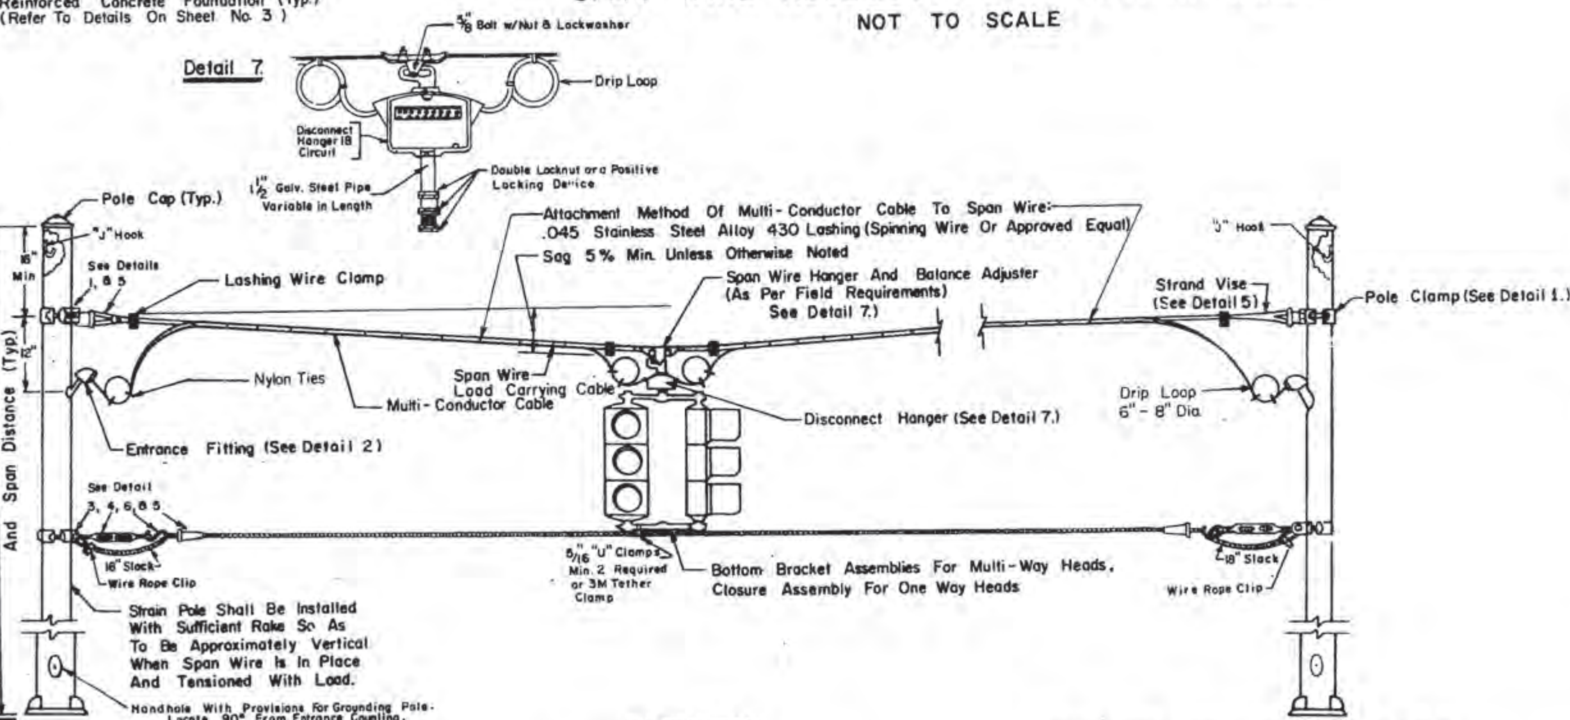
ELEVATION
SPAN WIRE ASSEMBLY WITH TETHER WIRE
NOT TO SCALE





ELEVATION
SPAN WIRE DETAIL
WITH TETHER WIRE
NOT TO SCALE

TETHER WIRE

The Tether Wire Cable Shall Be Not Less Than 1/4" Dia., Seven Wire, Steel Strand Cable Conforming To A.S.T.M. A475, Class A, Zinc Coated Steel Wire Strand.

SPAN WIRE LOAD CARRYING CABLE

The Span Wire Load Carrying Cable Shall Be Not Less Than 3/8" Dia., Seven Wire, Steel Strand Cable Conforming To A.S.T.M. A475, Class A, Extra High Strength (Min. Breaking Strength 15,400 lbs) Zinc Coated Steel Wire Strand. The Span Wire Must Be Designed And Checked For Load Capacity For Each Application.

GENERAL NOTES:

1. Poles Shall Not Be Installed And Signal Heads Shall Not Be Hung Until 28 Days After Concrete Foundation Has Been Placed Unless Otherwise Specified By The Engineer In Charge.
2. The Roadside Face Of All New Signal Poles Shall Be Installed A Minimum Of 2 Feet From The Face Of Curb.
3. All Exposed Corners And Edges Of Foundations Which Protrude Above The Adjacent Ground Shall Be Chamfered Or Rounded To Prevent Sharp Corners Or Edges.
4. Poles Shall Be Hot Dip Galvanized To A.S.T.M. Designation A123. Accessories Shall Be Hot Dip Galvanized To A.S.T.M. Designation A153.
5. Signal Head Weight Shall Include Cable Clamps, Universal Joint, Balance Adjuster, Disconnect Hanger And Signal Brackets.
6. All Appurtenances To Be Mounted On Poles Shall Be Fastened In The Manner Recommended By The Manufacturer.
7. MA (For Massachusetts), The Height Of Pole, The Rake Of Pole, The Manufacturer And The Pole I.D. Number Shall Be Etched On The Outside Wall Approximately 2 Feet Above The Foundation. The Letters Shall Be 1/4" In Size.
8. The Bottom Of All Signal Heads Shall Be Mounted At The Same Elevation With Hangers Varying In Length As Required.
9. Attachment Pole Clamps To Be Designed By The Manufacturer.
10. Strain Poles Shall Be Installed With Sufficient Rake So As To Be Approximately Vertical When Span Wire Is In Place And Tensioned With Load.

1. Foundations Shall Be Class "A" Cement Concrete Masonry.
2. Reinforcement Shall Be A.S.T.M. A615-Gr. 60.
3. Bolt Circle And Anchor Bolts To Be Provided By The Contractor Shall Be Consistent With Span Wire Assembly Design. The Anchor Bolts Shall Be Supplied With A Template For Setting The Bolts And Necessary Bolt Projections.
4. Provide For Electrical Conduit As Required.
5. Excavation Shall Be By The Auger Method To The Neat Lines Of The Outside Dimension Of The Foundations Without Disturbing The Soil Around And Below The Proposed Foundation Bottom. Alternate Methods Of Excavation May Be Submitted For Approval If They Meet The Requirements Listed In The General Notes Of Sheet 3 & 4.
6. The Earth Walls Of The Foundation Shall Be Adequately And Securely Protected At All Times Against Cave-Ins, Displacement Of The Surrounding Earth And For The Exclusion Of Ground Water. This May Be Done By The Use Of Steel Cylinder Liners Or Casings That Are Approved By The M.D.P.W.. If Liners Are Used They Must Be Reclaimed Provided That They Are Withdrawn As The Concrete Is Being Placed, Maintaining Sufficient Head Of Concrete Within The Liner To Prevent Reduction In The Foundation Diameter And To Prevent Extraneous Material From Falling In From The Sides And Mixing With The Concrete.
7. If The Soil Is Disturbed Or Removed Beyond The Neat Lines Of The Outside Dimension Of The Foundation As Specified, It Shall Be Replaced With Concrete. Any Additional Cost For The Concrete Shall Be Paid For By The Contractor.
8. Special Care Should Be Given To Areas Where Wet Soil Is Encountered, To Insure That The Preaugered Hole Does Not Collapse. This May Require The Use Of Steel Cylinder Liners Or Casings To Hold The Soil In Place Until Ready For Pouring. The Steel Cylinders Or Casings Shall Be Withdrawn As The Foundation Is Poured.
9. Vertical Reinforcement Bars Are To Be Evenly Spaced In The Foundation As Shown.
10. For Foundation Widths, Depths And Steel Reinforcing, See Foundation Design Charts On Sheet 4.

GENERAL NOTES (SI VERSION):

1. DETERMINATION OF EXISTING SOIL CONDITIONS SHALL BE MADE BY THE DESIGN ENGINEER.
2. IF A POOR SOIL OR LEDGE IS ENCOUNTERED, (i.e., ONE WHICH DOES NOT APPLY TO THE DESIGN CHARTS SHOWN ON THIS SHEET), AN ALTERNATE DESIGN SHALL BE DEVELOPED BY THE DESIGN ENGINEER AND SUBMITTED TO THE M.H.D. FOR APPROVAL. IF UTILITIES OR OTHER UNDERGROUND OBSTRUCTIONS ARE ENCOUNTERED IN THE PROPOSED FOUNDATION AREA DURING EXCAVATION, THE CONTRACTOR SHALL BACKFILL THE AREA TO ITS ORIGINAL CONDITION UNTIL AN ALTERNATE DESIGN HAS BEEN PROVIDED BY THE DESIGN ENGINEER.
3. FOR MOMENT DETERMINATION SEE "AASHTO STANDARD SPECIFICATIONS FOR STRUCTURAL SUPPORTS FOR HIGHWAY SIGNS AND TRAFFIC SIGNALS" LATEST EDITION.
4. FOR DETAIL OF FOUNDATIONS SEE SHEET 3 - "SPAN WIRE ASSEMBLY-FOUNDATION DETAILS.
5. SHAFT DEPTHS (D) IN METERS.

THIS PLAN NOT DESIGNED BY

EMERGENCY VEHICLE PRE–EMPTION OPERATION.

1. EMERGENCY VEHICLE PRE–EMPTION SIGNALS SHALL BE OPTICALLY TRANSMITTED BY OPTICAL EMITTERS MOUNTED IN EMERGENCY VEHICLES AND RECEIVED BY OPTICAL DETECTORS LOCATED AT EACH INTERSECTION.
2. PRE–EMPTION SIGNALS SHALL BE SERVICED ON A PRIORITY BASIS WITH DETECTORS D1, D2, D3, D4, D5, OR D6 ASSIGNED DESCENDING PRIORITIES AS FOLLOWS: (D1 HIGHEST AND D6 LOWEST)
3. IN RESPONSE TO A PRE–EMPTION SIGNAL RECEIVED AT AN INTERSECTION BY OPTICAL DETECTOR D1 (OR D2, D3, D4, D5, D6) THE CONTROLLER SHALL HOLD OR ADVANCE TO AND HOLD IN EMERGENCY VEHICLE PRE–EMPTION PHASE #1 (OR #2, #3, #4, #5, #6) GREEN FOR A MINIMUM OF TEN (10) SECONDS OR UNTIL PRE–EMPTION SIGNAL CEASES. THE CONTROLLER SHALL THEN TIME PRE–EMPTION PHASE CLEARANCE (4 SECONDS: YELLOW AND 1 SECOND: ALL RED) AND SERVICE PRE–EMPTION PHASE #2 (OR #1) IF NECESSARY, THEN TIME PRE–EMPTION EMERGENCY VEHICLE PHASE CLEARANCE AND RESUME NORMAL SIGNAL OPERATION. EMERGENCY VEHICLE PRE–EMPTION PHASE #3, #4, #5, AND #6 SHALL BE SIMILARLY SERVED.
4. MINIMUM GREEN, NORMAL VEHICLE CLEARANCE, SHALL BE PROVIDED ON PHASES THAT ARE TO BE TERMINATED BY PRE–EMPTION DEMAND.
5. PRE–EMPTION STROBE SHALL BE ILLUMINATED WHENEVER ANY EMERGENCY VEHICLE PRE–EMPTION GREEN IS ON.
6. DURING PRE–EMPTION, PEDESTRIAN MOVEMENTS SHALL NOT BE ACTIVE.

TRAFFIC CONTROL SIGNAL REGULATION

City or Town: NORWOOD
Location: PROVIDENCE HWY (RTE 1) AT UNIVERSITY AVE/EVERETT ST
Regulation No.: AB-220-2950(E) **Date:** 6/26/2018

Pursuant to MASS. GEN. LAWS c. 85, § 2 the Massachusetts Department of Transportation ("MassDOT") hereby approves the following described traffic control signal installation and auxiliary signs and surface markings for the above captioned location, provided that a permit for the opening of the road and the placing of structures thereon shall be received from the board or officer in charge of the road.

This Regulation is granted for the specific signal installation described herein and for its operation in accordance with the conditions set forth below and with the requirements of the MassDOT. The details for any materials, alterations, or any continued* or substantial departure from the provisions of this Regulation must be submitted to the MassDOT for approval with data sufficient to justify such modification. Failure to comply with the requirements and standards set forth by the MassDOT shall automatically void this Regulation during such time as non-compliance exists.

I. STANDARDS OF INSTALLATION

The traffic control signal installation and all auxiliary sign and surface markings which are used in conjunction with such installation shall conform with the requirements of the MassDOT and with the attached sketch.

II. OPERATION OF SIGNALS

1.	Traffic Control.....	Actuated
2.	Coordination.....	None
3.	Special Connections.....	Emergency Pre-Emption
4.	Timing for Automatic Operations....	*See Attached*
5.	Hours for Automatic Operation.....	Signals shall be operated in stop and go mode continuously unless unusual or emergency conditions arise which temporarily justify flashing operations or manual override.
6.	Flashing Operation.....	Whenever a signal is not operating as traffic control device (stop and go), it must Flash Yellow or Flash Red as set forth in the accompanying timing and sequence chart for emergency operation. The flashing rate must conform to the latest edition of the Manual on Uniform Traffic Control Devices (MUTCD).
7.	Manual Operation.....	Signals may be operated manually at any time irrespective of the hours designated in Part II (5) of this Regulation.
8.	Discontinuance.....	Upon proper justification signals can be discontinued. If required and justified, appropriate alternate traffic controls must be installed prior to discontinuance of signals. Discontinued signal faces must be turned away from traffic, taken down or covered and the District Highway Director notified.

Issuance of this Regulation Supersedes and Terminates:

State Permit No.: AB-220-2950(B) issued to this intersection

TIMING IN SECONDS

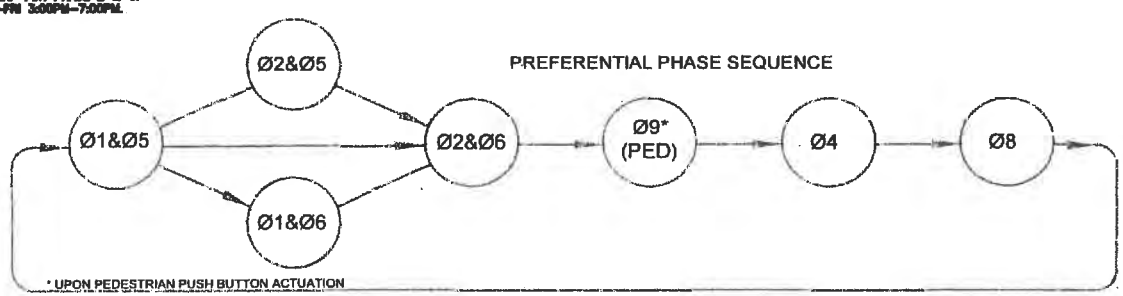
MINIMUM GREEN (INITIAL)	8			15			6			8			15			6			7			
PASSAGE TIME (VEHICLE)	2			2			3			2			2			3						
MAXIMUM 1	15			50			20			17			45			13						
MAXIMUM 2	12			45			27			15			40			15						
MAXIMUM 3	15			55			15			15			55			20						
YELLOW CLEARANCE		4			5			4			4			5			4.5			3		
RED CLEARANCE			4			1			2.5			4			1			2				3
PEDESTRIAN WALK				7									7						7			
PEDESTRIAN CLEARANCE				14									21						21			
TIME BEFORE REDUCTION (TBR)				20									20									
TIME TO REDUCE (TTR)				10									10									
MIN GAP				1.5									1.5									

CONFLICT FLASH OPERATION ONLY

DETECTOR MEMORY	NON–LOCK			NON–LOCK			NON–LOCK			NON–LOCK			NON–LOCK			NON–LOCK			LOCK		
RECALL	OFF			SOFT			OFF			OFF			SOFT			OFF			OFF		

COORDINATION DATA			COORDINATION PHASE SPLIT TIMES								

NOTES:
1. AUTOMATIC FLASHING OPERATION PER 2009 M.U.T.C.D., AS AMENDED.
2. * UPON PEDESTRIAN PUSH BUTTON ACTUATION
3. Y = YIELD CONTROL
4. MAXIMUM 1 = NORMAL OPERATION
5. MAXIMUM 2 = MON–FRI 6:00AM – 10:00AM
6. STOP AND GO OPERATION FOR 24 HOURS PER DAY. FLASHING OPERATION FOR EMERGENCY ONLY.
7. DURING PEDESTRIAN INTERVAL, FDW THROUGH YELLOW OPERATION SHALL BE IN EFFECT.
8. INHIBIT MAX TERMINATION SHALL BE IN EFFECT DURING COORDINATION.
9. NO SIMULTANEOUS GAP FOR PHASE 2 & 6.
10. MAXIMUM 3 = MON–FRI 3:00PM–7:00PM.

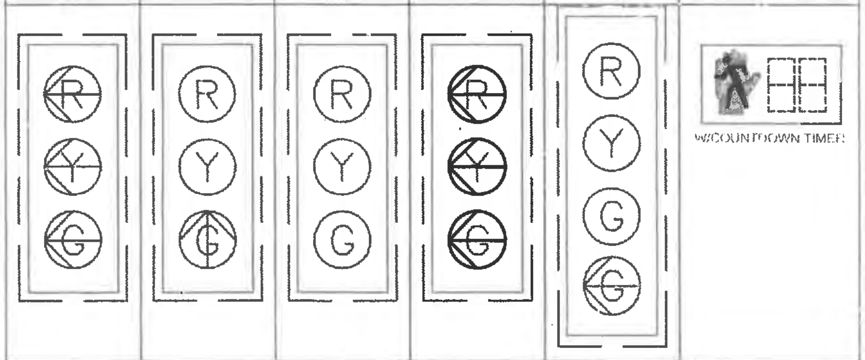


SEQUENCE & TIMING NOTES

1. IF THE ASSIGNED RIGHT OF WAY FOR ANY TRAFFIC MOVEMENT IS TO REMAIN CALLED DURING THE NEXT CALLED PHASE, A SIGNAL INDICATION FOR THAT TRAFFIC MOVEMENT WILL NOT CHANGE DURING THE CLEARANCE INTERVAL.
2. THE RIGHT OF WAY MAY BE ASSIGNED TO ANY PHASE OR ANY COMBINATION OF NON-OPPOSING MOVEMENTS.
3. IF CALLS EXIST ON ALL PHASES, THE ASSIGNMENT OF RIGHT OF WAY SHALL BE IN ACCORDANCE WITH THE FOLLOWING PHASE SEQUENCE:
4. IF THE ASSIGNED RIGHT OF WAY FOR ANY TRAFFIC MOVEMENT IS TO CHANGE DURING THE NEXT CALLED PHASE, A SIGNAL INDICATION FOR THAT MOVEMENT WILL DISPLAY ITS ASSIGNED RATE DURING THE CLEARANCE INTERVAL.

SIGNAL HEAD DATA

[illegible]	A,B,D,E	[illegible]	[illegible]	[illegible]	P1-P12



ALL 12" LENS

NOTES:
1. ALL SIGNAL HEADS ARE RIGID MOUNTED.
2. ALL SIGNAL HEADS ARE EQUIPPED WITH 5"± NON-LOUVERED BACKPLATES AND 3" REFLECTIVE BORDERS.
3. ALL SIGNAL HEADS ARE EQUIPPED WITH TUNNEL VISORS.
4. ALL SIGNAL DISPLAYS ARE EQUIPPED WITH L.E.D. MODULES.

EMERGENCY VEHICLE PRE-EMPTION OPERATION

1. EMERGENCY VEHICLE PRE-EMPTION SIGNALS SHALL BE OPTICALLY TRANSMITTED BY OPTICAL EMITTERS MOUNTED IN EMERGENCY VEHICLES AND RECEIVED BY OPTICAL DETECTORS LOCATED AT EACH INTERSECTION.

2. [illegible] SERVICED ON A PRIORITY BASIS WITH [illegible] SIGNED DESCENDING PRIORITIES AS FOLLOWS: [illegible]

3. [illegible] PRE-EMPTION SIGNAL RECEIVED AT AN INTERSECTION BY [illegible] D2, D4 [illegible] CONTROLLER SHALL HOLD OR [illegible] EMERGENCY VEHICLE PRE-EMPTION PHASE [illegible] #1 (OR [illegible]) A MINIMUM OF TEN (10) SECONDS OR UNTIL PRE-EMPTION [illegible] CONTROLLER SHALL THEN TIME PRE-EMPTION PHASE [illegible] PHASING AS SHOWN IN THE SEQUENCE AND [illegible] EMERGENCY VEHICLE PRE-EMPTION [illegible]

4. [illegible]

5. [illegible]

PRE-EMPTION PHASING & PRIORITY			
[illegible]	[illegible] PHASE ASSIGNMENT	MOVEMENTS	VEHICLE PHASE ASSIGNMENT
[illegible]	[illegible]	[illegible]	[illegible]

Intersection Summary

Cycle Length: 80
Actuated Cycle Length: 80
Offset: 0 (0%), Referenced to phase 2:EBWB, Start of Green
Control Type: Actuated-Coordinated
Maximum v/c Ratio: 0.67
Intersection Signal Delay: 14.8 Intersection LOS: B
Intersection Capacity Utilization 66.5% ICU Level of Service C
Analysis Period (min) 15
\# 95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.
m Volume for 95th percentile queue is metered by upstream signal.

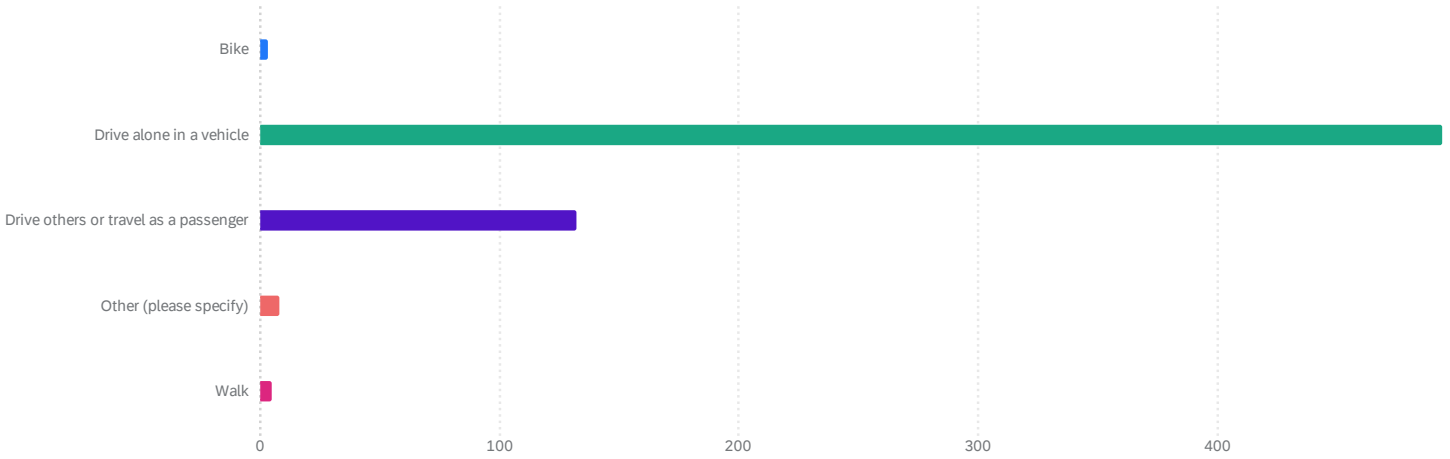
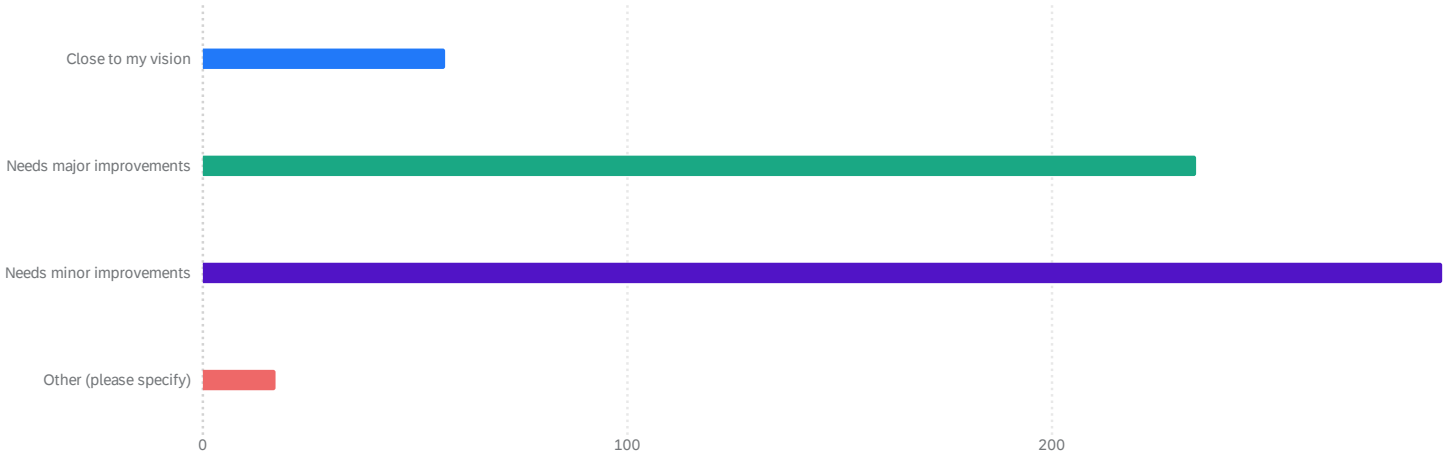
How do you typically travel on this corridor? Select only one.



How do you typically travel on this corridor? Select only one.: Other (please specify)

- Bus
- shuttle bus
- Moderna shuttle
- drive alone and with others
- Drive myself and family
- All of the above.

How close is Route 1 to the vision you have for the area? Select only one.



How close is Route 1 to the vision you have for the area? Select only one.: Other (please specify)

Do not travel on rt 1

I don't have a vision for the area

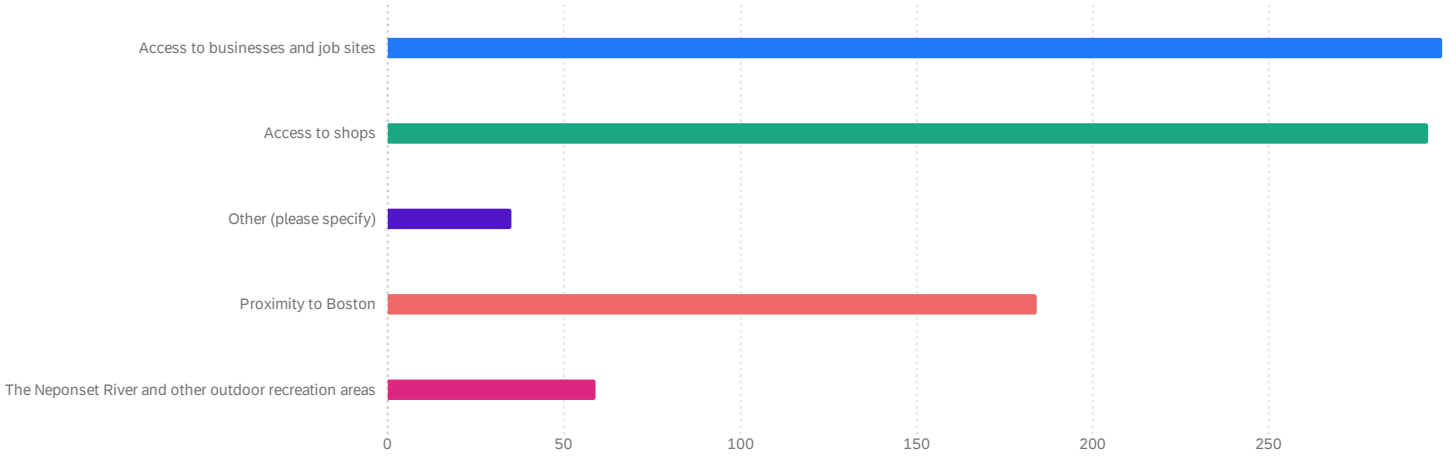
Unclear what question is asking

Has not seemingly changed in the 40 years I've known it

Haven't given much thought

As it is I avoid it as much as possible.

What do you like most about the Route 1 corridor? Select all that apply.



What do you like most about the Route 1 corridor? Select all that apply.: Other (please specify)

Closest route to get to work

quickest route to work

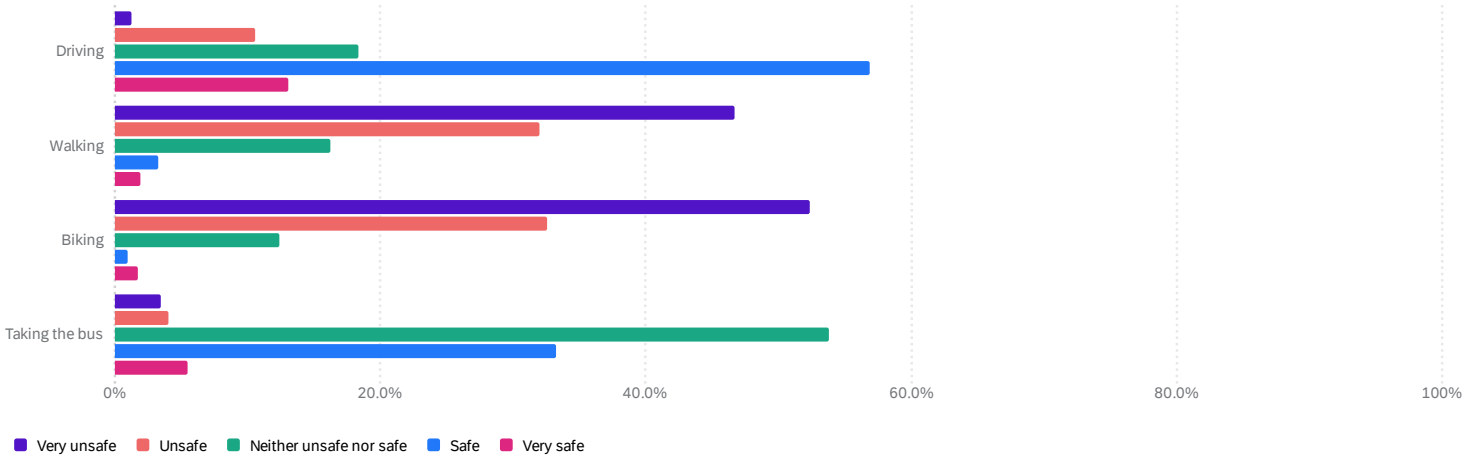
i work on route 1

Commute to/from work

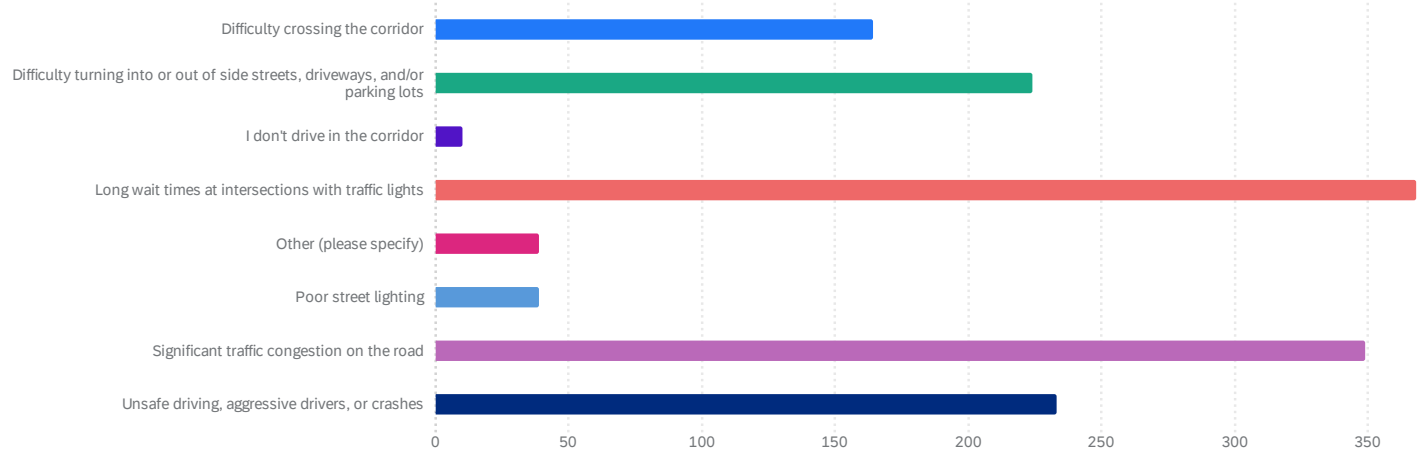
Faster than Route 1A. Good for moving around Norwood and the surrounding town without using the highway.

good alternative to 128, 95, downtown Norwood

How safe do you feel doing the following activities in the corridor? Select only one for each transportation mode.



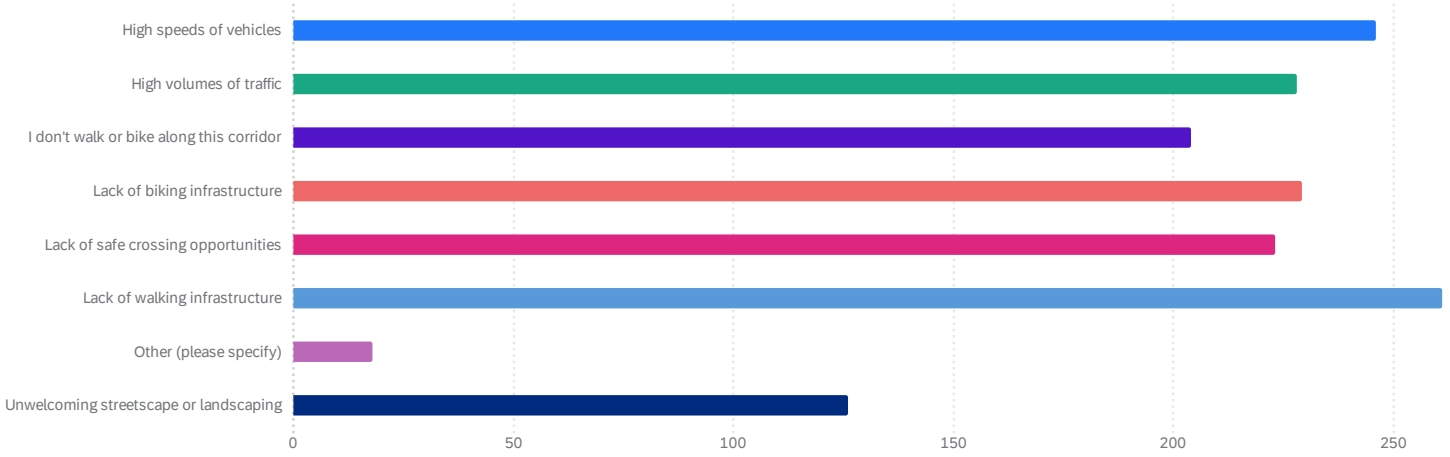
What challenges do you experience driving in the corridor? Select all that apply.



What challenges do you experience driving in the corridor? Select all that apply.: Other (please specify)

- The Rotary is challenging, People do not yeild
- People driving way too fast, difficult to merge, relentless tailgating if you don't drive 60 MPH
- That intersection is just horrendous all the way around.
- it's fine, outside of peak congested times
- The circle has aggressive drivers
- rough road

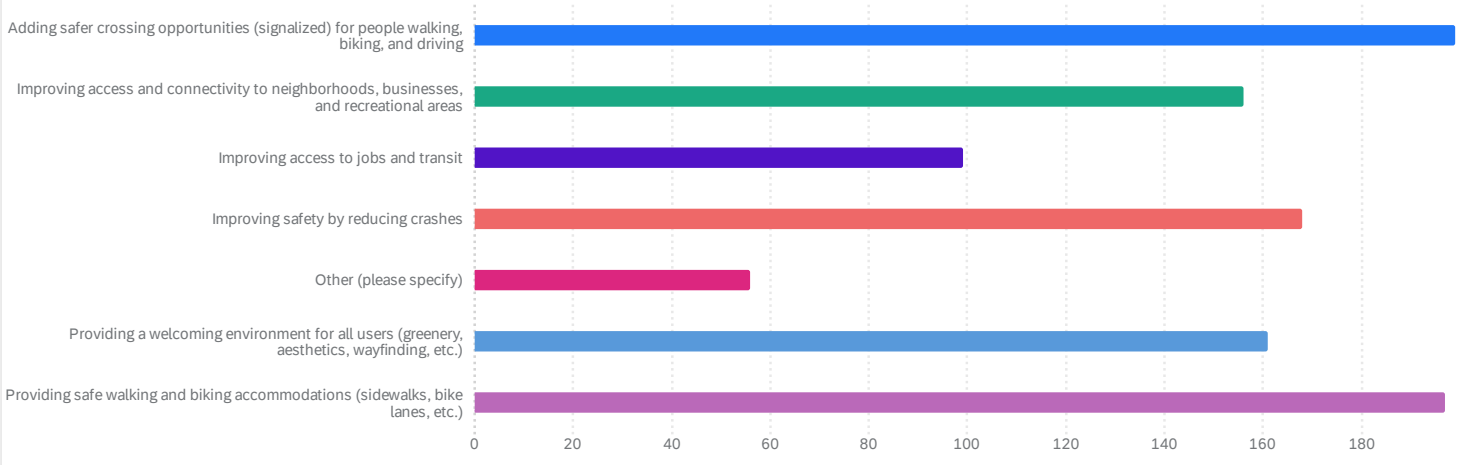
What challenges do you experience walking or biking in the corridor? Select all that apply.



What challenges do you experience walking or biking in the corridor? Select all that apply.: Other (please specify)

Not walkable or bikeable at all really. Many sections without sidewalks. No bikelanes anywhere. Few opportunities to cross the road.
NA
I don't bike but would like to
Not at all set up for walking or biking
again, the map only allowed for three locations. the entire corridor is dangerous for walking and biking. and one reason that isn't listed specifically, though could be embedded in unwelcoming landscaping, is overgrowth on the sidewalk because MASSDOT does not maintain the sidewalks well, either in terms of safe and even concrete or clearing poison ivy and other invasive vegetation.

What are two major ways you would like to see Route 1 improved? Select only two.



What are two major ways you would like to see Route 1 improved? Select only two.: Other (please specify)

1. Better traffic flow/less congestion

improve lights and intersections that back up considerably and take too long

Dangerous intersections at Everett, Access/Nahatan, Dean, Morse are made more dangerous by the numerous business with entry/exit very close to Rte 1

Improve road quality. Route 1 has significant amount of potholes and debris

I don't walk or bike along the corridor and don't see many other people doing it either. My biggest issue is with traffic at the Everrett St/Rt 1 intersection. The left onto Everrett when going south on RT 1 could be improved which would alleviate some of the backup.

Please use the space below to provide any additional comments.

Improved visibility to signage for side streets, Highway, Major retail (seniors looking for Frugal Fannies, for example)

Biking along Route 1, or even crossing Route 1 on a bike doesn't feel very safe. It would be nice if it was safer.

Route 1 is a major, high speed, road way. I do not expect to see/have people walking/riding bikes on this road for that reason. I have seen people run across the road, over the barriers -- not safe. If there are needs for crossing at other locations, then consider installing pedestrian bridges

The area is tired looking and has not changed in the 40 + years I've lived/worked in the area. I never see any police and drivers know it and are super aggressive. A little sprucing up and some police presence would be a good start to changing the mindsets of the area as a Nascar raceway.

The Everett St/University Ave intersection is always backed up when coming from Everett St

MassDOT Highway Division Project Development Process

Overview of the Project Development Process

Transportation decision-making is complex and can be influenced by legislative mandates, environmental regulations, financial limitations, agency programmatic commitments, and partnering opportunities. Decision-makers and reviewing agencies, when consulted early and often throughout the project development process, can ensure that all participants understand the potential impact these factors can have on project implementation. Project development is the process that takes a transportation improvement from concept through construction.

The MassDOT Highway Division has developed a comprehensive project development process which is contained in Chapter 2 of the *MassDOT Highway Division's Project Development and Design Guide*. The eight-step process covers a range of activities extending from identification of a project need, through completion of a set of finished contract plans, to construction of the project. The sequence of decisions made through the project development process progressively narrows the project focus and, ultimately, leads to a project that addresses the identified needs. The descriptions provided below are focused on the process for a highway project, but the same basic process will need to be followed for non-highway projects as well.

1. Needs Identification

For each of the locations at which an improvement is to be implemented, MassDOT leads an effort to define the problem, establishes project goals and objectives, and defines the scope of the planning needed for implementation. To that end, it has to complete a Project Need Form (PNF), which states in general terms the deficiencies or needs related to the transportation facility or location. The PNF documents the problems and explains why corrective action is needed. For this study, the information defining the need for the project will be drawn primarily, perhaps exclusively, from the present report. Also, at this point in the process, MassDOT meets with potential participants, such as the Metropolitan Planning Organization (MPO) and community members, to allow for an informal review of the project.

The PNF is reviewed by the MassDOT Highway Division district office whose jurisdiction includes the location of the proposed project. MassDOT also sends the PNF to the MPO, for informational purposes. The outcome of this step determines whether the project requires further planning, whether it is already well supported by prior planning studies, and, therefore, whether it is ready to move forward into the design phase, or whether it should be dismissed from further consideration.

2. Planning

This phase will likely not be required for the implementation of the improvements proposed in this planning study, as this planning report should constitute the outcome of this step. However, in general, the purpose of this implementation step is for the project proponent to identify issues, impacts, and approvals that may need to be obtained, so that the subsequent design and permitting processes are understood.

The level of planning needed will vary widely, based on the complexity of the project. Typical tasks include: define the existing context, confirm project need, establish goals and objectives, initiate public outreach, define the project, collect data, develop and analyze alternatives, make recommendations, and provide documentation. Likely outcomes include consensus on the project definition to enable it to move forward into environmental documentation (if needed) and design, or a recommendation to delay the project or dismiss it from further consideration.

3. Project Initiation

At this point in the process, the proponent, MassDOT Highway Division, fills out a Project Initiation Form (PIF) for each improvement, which is reviewed by its Project Review Committee (PRC) and the MPO. The PRC is composed of the Chief Engineer, each District Highway Director, and representatives of the Project Management, Environmental, Planning, Right-of-Way, Traffic, and Bridge departments, and the MassDOT Federal Aid Program Office (FAPO). The PIF documents the project type and description, summarizes the project planning process, identifies likely funding and project management responsibility, and defines a plan for interagency and public participation. First the PRC reviews and evaluates the proposed project based on the MassDOT's statewide priorities and criteria. If the result is positive, MassDOT Highway Division moves the project forward to the design phase, and to programming review by the MPO. The PRC may provide a Project Management Plan to define roles and responsibilities for subsequent steps. The MPO review includes project evaluation based on the MPO's regional priorities and criteria. The MPO may assign project evaluation criteria score, a Transportation Improvement Program (TIP) year, a tentative project category, and a tentative funding category.

4. Environmental Permitting, Design, and Right-of-Way Process

This step has four distinct but closely integrated elements: public outreach, environmental documentation and permitting (if required), design, and right-of-way acquisition (if required). The outcome of this step is a fully designed and permitted project ready for construction. However, a project does not have to be fully designed in order for the MPO to program it in the TIP. The sections below provide more detailed information on the four elements of this step of the project development process.

Public Outreach

Continued public outreach in the design and environmental process is essential to maintain public support for the project and to seek meaningful input on the design elements. The public outreach is often in the form of required public hearings, but can also include less formal dialogues with those interested in and affected by a proposed project.

Environmental Documentation and Permitting

The project proponent, in coordination with the Environmental Services section of the MassDOT Highway Division, will be responsible for identifying and complying with all applicable federal, state, and local environmental laws and requirements. This includes determining the appropriate project category for both the Massachusetts Environmental Protection Act (MEPA) and the National Environmental Protection Act (NEPA). Environmental documentation and permitting is often completed in conjunction with the **Preliminary Design** phase described below.

Design

There are three major phases of design. The first is **Preliminary Design**, which is also referred to as the 25-percent submission. The major components of this phase include full survey of the project area, preparation of base plans, development of basic geometric layout, development of preliminary cost estimates, and submission of a functional design report. Preliminary Design, although not required to, is often completed in conjunction with the Environmental Documentation and Permitting. The next phase is **Final Design**, which is also referred to as the 75-percent and 100-percent submission. The major components of this phase include preparation of a subsurface exploratory plan (if required), coordination of utility relocations, development of traffic management plans through construction zones, development of final cost estimates, and refinement and finalization of the construction plans. Once Final Design is complete, a full set of **Plans, Specifications, and Estimates (PS&E)** is developed for the project.

Right-of-Way Acquisition
A separate set of Right-of-Way plans are required for any project that requires land acquisition or easements. The plans must identify the existing and proposed layout lines, easements, property lines, names of property owners, and the dimensions and areas of estimated takings and easements.

5. Programming (Identification of Funding)
Programming, which typically begins during the design phase, can actually occur at any time during the process, from planning to design. In this step, which is distinct from project initiation, the proponent requests that the MPO place the project in the region's Transportation Improvement Program (TIP). The proponent requesting the project's listing on the TIP can be the community or it can be one of the MPO member agencies (the Regional Planning Agency, MassDOT, and the Regional Transit Authority). The MPO then considers the project in terms of state and regional needs, evaluation criteria, and compliance with the regional Transportation Plan and decides whether to place it in the draft TIP for public review and then in the final TIP.

6. Procurement
Following project design and programming of a highway project, the MassDOT Highway Division publishes a request for proposals. It then reviews the bids and awards the contract to the qualified bidder with the lowest bid.

7. Construction
After a construction contract is awarded, MassDOT Highway Division and the contractor develop a public participation plan and a management plan for the construction process.

8. Project Assessment
The purpose of this step is to receive constituents' comments on the project development process and the project's design elements. MassDOT Highway Division can apply what is learned in this process to future projects.

Project Development Schematic Timetable

Description	Schedule Influence	Typical Duration
Step I: Problem/Need/Opportunity Identification The proponent completes a Project Need Form (PNF). This form is then reviewed by the MassDOT District office which provides guidance to the proponent on the subsequent steps of the process.	The Project Need Form has been developed so that it can be prepared quickly by the proponent, including any supporting data that is readily available. The District office shall return comments to the proponent within one month of PNF submission.	1 to 3 months
Step II: Planning Project planning can range from agreement that the problem should be addressed through a clear solution to a detailed analysis of alternatives and their impacts.	For some projects, no planning beyond preparation of the Project Need Form is required. Some projects require a planning study centered on specific project issues associated with the proposed solution or a narrow family of alternatives. More complex projects will likely require a detailed alternatives analysis.	Project Planning Report: 3 to 24+ months
Step III: Project Initiation The proponent prepares and submits a Project Initiation Form (PIF) and a Transportation Evaluation Criteria (TEC) form in this step. The PIF and TEC are informally reviewed by the Metropolitan Planning Organization (MPO) and MassDOT District office, and formally reviewed by the PRC.	The PIF includes refinement of the preliminary information contained in the PNF. Additional information summarizing the results of the planning process, such as the Project Planning Report, are included with the PIF and TEC. The schedule is determined by PRC staff review (dependent on project complexity) and meeting schedule.	1 to 4 months
Step IV: Design, Environmental, and Right of Way The proponent completes the project design. Concurrently, the proponent completes necessary environmental permitting analyses and files applications for permits. Any right of way needed for the project is identified and the acquisition process begins.	The schedule for this step is dependent upon the size of the project and the complexity of the design, permitting, and right-of-way issues. Design review by the MassDOT district and appropriate sections is completed in this step.	3 to 48+ months
Step V: Programming The MPO considers the project in terms of its regional priorities and determines whether or not to include the project in the draft Regional Transportation Improvement Program (TIP) which is then made available for public comment. The TIP includes a project description and funding source.	The schedule for this step is subject to each MPO's programming cycle and meeting schedule. It is also possible that the MPO will not include a project in its Draft TIP based on its review and approval procedures.	3 to 12+ months
Step VI: Procurement The project is advertised for construction and a contract awarded.	Administration of competing projects can influence the advertising schedule.	1 to 12 months
Step VII: Construction The construction process is initiated including public notification and any anticipated public involvement. Construction continues to project completion.	The duration for this step is entirely dependent upon project complexity and phasing.	3 to 60+ months
Step VIII: Project Assessment The construction period is complete and project elements and processes are evaluated on a voluntary basis.	The duration for this step is dependent upon the proponent's approach to this step and any follow-up required.	1 month
